Pharmaceuticals and Their Spiritual Origins

I want to talk to you about pharmaceuticals. And I'm not saying that they don't have an applicable moment in time because in the emergency phase and the trauma phase, they're some of the best gifts that we have.

But in terms of chronic care of a human body, I wanna maybe give you some information that you probably have never heard before. So, there's a few people that I would consider my mentors or, you know, much more educated than I and I really pay attention to them.

And there was one man I follow on Facebook a lot who always talks about the wolf in sheep's clothing or the devil in sheeps clothing and how the signs of the Devil are around us 24-7.

We just have to look at the clear-cut obvious signs. So one day he posted about, the word pharmacy, pharmacist, pharmaceutical, and the root of that. I'm going to share it with you.

On the Greek word, pharmakeia. The Greek Word pharmakia literally means drugs and appears five times in the New Testament. Pharmakea is translated into our English Bible as either witchcraft or sorcery-ness.

Why Medications Manage Symptoms, Not Causes

I said all of that correct. The word pharmacia is a representation of pharmacy, pharmacist, pharmaceutical that translate in English in the Bible of which is witchcraft.

So when people come across something like what we do with nutrition response testing and they go, what are you a voodoo doctor? You push on people's arms.

They say, no, actually, in fact, the medical system is more the voodo doctors. That's kind of what their name really means. and it kind of blows people away.

Check it out, pharmakia. Look up the definition of the word pharmakeia and its origination and what the purpose of it is. And if you're a Christian, definitely check it in the New Testament because Jesus will refer to it many times over as being witchcraft.

But aside from those couple spiritual points about the origin of pharmaceuticals or pharmacies or pharmacists, this isn't to say that the individuals or the people that are involved with that, are all satanic or bad people.

Because I believe that anybody that gets into these fields is doing it with the intention of helping and healing and bettering somebody's life. But the controlling factors at the collegiate and the institutional level and in the drug making level, That is what we also know is from the Bible, the root of all evil is the love of money.

Why do we see these astronomical drug prices? Why did we need to push so many people on drugs? why are we the most overly medicated country in the world?

And yet, we'd say we're the more technologically advanced healthcare wise, but we are the sickest and we were the worst off health wise in United States.

If we even broke down what the purpose of a pharmaceutical is to the human body more, you might be kind of surprised to know this. First, let's start with the definition of the human body's autonomic nervous system.

We are a self-regulating organism, meaning this body is designed to do everything on its own, contingent on the right parts. Pharmaceuticals are, by definition, designed bypass the autonomus nervous.

So why in the world would we ever want to bypass our own God-given abilities?

Root-Cause Wellness and Nutrition Response Testing

Well, if we had an emergency or a trauma or some life or death matter, yeah, please, those could be some amazing things. But in an arena of chronic conditions, We're taking medications to treat a symptom while never looking at or addressing the underlining root cause, because that's really what all pharmaceuticals do.

They bypass the body, they give a symptoms change, but they never correct the problem. Case in point, high blood pressure medication. You have a ridiculously high blood pressure reading.

You get put on blood-pressure meds. Your reading comes down. Hallelujah, we're happy. But if you don't take your blood pressur med or if don t make lifestyle changes and you miss a med, what happens?

whoop, continues to come up. So are we ever really correcting why you have high blood pressure in the first place? Or are just managing and treating a symptom?

Now, if that's something that you're comfortable with, that that is a lifestyle that your accepting of, then God bless you, I'm not here to judge you on it.

But you were designed for so much more than the management of a symptoms through a synthetic man-made poison to simply adjust a system. The better alternative, in my opinion, is to get to the root cause of your health concerns, to create a lifestyle that is conducive to your goals that you have, and no longer become a statistic on a medication that's just having a symptom managed.

Synergy Nutrition and Wellness can do just that for you. Come check us out.
