Introduction to Longevity Leaders

Cage. Then you have all this electronics and you have the battery, and then the longer you drive, the worse the exposure gets. And then you have this cross amplification if you are also on your phone.

Right. Or if you have a passenger, maybe two that are also on their phones. So then you have suddenly a real rough EMF swap. It's an EMF goulash. At that point I think and then you know, what do you do.

Right. And then the worst scenario is when you charge your batteries, I think people intuitively already leave the car when they charge the battery. But if someone doesn't do that like get out of there.

Yeah. I mean, you can use our tech. So our tech has been shown, to neutralize all of those negative effects. And even in electric cars, the base institute tested all the different organ functions tested to really bad deregulation when they got an electric car.

And in all these stress situations. What if aging isn't about slowing down, but leveling up? I'm Doctor Isaac Jones. This is the Longevity Leaders podcast.

Welcome. I'm Doctor Ashley Beckman here with Longevity Leaders podcast. And I'm really excited today because we have Philip from Leila Quantum. And I'm a big fan of your products.

But so I'm really excited to have you here. So we can get a little bit into the science and how they actually work. Sounds great. Thanks so much for having me. Of course.

So one thing that I've noticed a lot. So a bunch of my clients I work in mold exposure a lot.

How Leila Quantum Technology Works

That's majority of my clients in lime. So there are a lot of connections and things with EMF sensitivity. And we're seeing this more and more with people that have electric cars.

And just again, if you live in a city, there are a lot of exposures that we didn't even have, you know, 5 or 10 years ago. Can you go into a little bit about how your technology works first, and if this is about shielding yourself or blocking EMF or how it works.

Exactly. So our technology works straight on the bio field. It strengthens the human bio field and any biofuel. Frankly it plant has a bio field as well.

Pets have a biofuel. We have significant positive results with pets by the way also. And that's how it works. And then it improves from there. The general body functions and all backed by over 40 placebo controlled trials.

And I'm going to come to the EMF topic, but I'm not starting with that because EMF is really just 5 or 10% of what our technology is capable of. It can improve your cellular function, up to a wound healing ATP production increase.

It can help with blood improvement, white blood cell activity, motility, red blood cell D clotting. For example, a parasitic load in the blood, things like that.

It can help with VS or with a nervous system. It can help with the brain significantly. It can de-stress your brain. And, yeah, it has a lot of other positive effects, that you can measure in regards to food sensitivities and things like that.

And it can structure water, right. So those are just some of the basic things that the technology can do. And then it's so happens that with our technology, we can neutralize the negative effects of electromagnetic fields as well, very effectively and in a very modern way.

Because the big question is, okay, so how we want to tear down the 5G towers so that we don't have to live in this EMF soup, the answer is we can't and we won't.

Right. They will be there and we'll have six G and seven G towers there at some point unless we develop, like, quantum, phones. Right. That works via the quantum field, but I think that may take still another 100 years. Maybe.

So, our technology can harmonize electromagnetic fields. It doesn't block it. We can block it with our EMF clothing, because that literally blocks over 99% of electromagnetic fields.

But the harmonizing works in a way that the quantum field is below subatomic, you can say, and it has, vibration that it sends out into all directions.

And it if you have frequencies that are harmful, like 5G waves, for example, or other microwaves, then the analogy is, if you were to hit me in the face, it hurts.

If you give me an acupressure on the neck, it's beneficial to me. That's pretty much what happens. So the 5G without the quantum energy around, it's not beneficial to your body, right?

Actually, it really stresses you out completely. You can see it in your blood and your heart rate in your brain, etc.. And then obviously we know the long term results, right?

You know, the. Yeah. Up to the cancer situation. Right.

Charging Foods, Water, and Supplements

And other things. So with our technology it harmonizes these. Then you can have them around but they don't bother you. That's pretty much how it works.

And it's not for us. It's not just a claim. You know I know that there's a lot of quantum stuff out there. You know, we always laugh and say, that's like the quantum corn flakes types of things, but our stuff really works.

And we have over 40 placebo controlled trials and we even invite people, and doctors also to, to study is, you know, we're never afraid to get tested because that stuff really works.

And that's what's really fascinating, I think, is I was just listening to speak and seeing some of your slides and presentation on the studies, and there were a few things that were more than a few that were very interesting.

But the live blood cell analysis, to see all of the the kind of like the there's a really tightly stacked red, red blood cells. And then once you were wearing, I think it was this where they were exposed or what was the trial using.

So in that case, it was one of our blocks. Yeah. In that study was actually all weakest blocks. So the stronger block works even better and even faster.

Right. But we have done these tests also with the caps. Also, all of these products have positive effects, but then the block school further and they work faster. Yes.

How does one use the block? Is it just by proximity? I mean, I know you can also add because I go to a place that infuses and charges the smoothies in the blocks.

Right. Yeah. But and you can charge supplements and things, probably jewelry, something that holds energy. Yep. Anything. You can infuse anything with quantum energy.

And if you infuse jewelry for example, it increases the vibration of those you know, metals or your watch or whatever. If you have silverware, that's a good test.

You put it in. And after that, the vibration will have significantly increased. And even if people cannot perceive energy, they will tell you, oh my God, it's so much more beautiful here.

And they won't be able to tell you, like why that is right. But there are people, including myself, that can see energy or perceive energy fields, and you can actually notice the vibrational difference.

A lot of people, you know, they don't really see it, but they can feel it. Right? So you you feel one that's charged in one hand, the other one on the other, and it just feels different.

So that's what you can do then with water and with foods, if you put them in, you also infuse them. But it has it has still the same effect. But it's it's different because it's sort of the water.

And the food itself that gets, infused with quantum energy. And then when you consume these foods, suddenly they're more bioavailable and they're basically batter better to consume.

So there there have been two pilot studies that were done in Germany in regards to food sensitivities, and they showed a 55 to 85% reduction in stress response.

And they tested things like lactose, gluten sensitivities, sugar. Oh yeah, I sugar always leads to a stress response. So if you can reduce that by 7,080% I mean, yeah.

How great is that. You know. Well and it's amazing too because you're charging these foods that have their vital key already, but then just exponentially balancing them for your system.

If you're a medical doctor, nurse practitioner, chiropractor or other health expert that's stuck in a broken system, there's a better way. The Freedom Webinar shows you a proven five step system to build a seven figure virtual health practice, or how to modernize your current brick and mortar practice without the burnout.

Quantum Entanglement and Quantum Upgrade

Yeah, and you know, that's one of those the struggles, I mean, struggles in quotation marks that that we have read that most people out there don't yet understand that they are energy and frequency to begin with, and that there is even something like energy, because the world we come from is so dense.

And, you know, the narrative is always bit just about the physical. That doesn't change the fact, though, that we are energy and frequency at core, and more people are waking up to that and you can start feeling that.

And right. And so we have a solution for that. And that's the only reason why it also works. Because it exists. Yes. And that's why we can prove it all the time.

Like any time of the day, we can prove that our technology works and not just every now and then in 100% of the cases. And so then we come to the next use case of these blocks, right.

That's just putting them in your home. And do nothing with it. And it just harmonizes your whole space because it has a large radius. So it takes care of the electromagnetic fields at home.

Then you can put your hands inside or your feet, or, you know, even your head, whatever you want. And you can have greater effects. So if people, you know, have arthritis, for example, they would use that on a regular basis.

If you want to kickstart your, you know, own recovery, for example, that's where you would use it for as well. And that's those are pretty much the use cases for the blocks.

So they work even just within the space. How what is that circumference that they encompass? I would say every regular home will be covered fully by any of our blocks except the quantum block, the quantum blog.

That's the weakest device. And it's specifically for copying frequencies. And and you know, some people that have to use pharmaceuticals and they know about what our technology does, they would like to charge also that pharmaceuticals with quantum energies.

So to lessen the negative effects. And for that we don't recommend that with any block except with the quantum block, because that's weak enough but strong enough to have a positive effect, but also not to alter the, the medication or the substance you put in.

Because if you, for example, if you took, stronger blog and then you put your vitamin C inside, it'll be stronger and you will you will need less of that.

So we have a lot of clinics that use our technology, and they test their patients and, for certain supplements, and then they test them once the supplements are put in and they need less.

I love that. Usually, and if they need the same result, the same, then usually they just need it more because the the efficacy is higher. That's usually what we find.

And that's the thing is, you know, a lot of clients are going through supplement fatigue. They're on so many things. And so if you have things that where we can harmonize your bio field just to just, again, you're harmonizing so that the things you do take are more effective.

And then especially if you're charging them it's exponentially better. Yeah, yeah. Do I think you spoke about this a tiny bit but quantum entanglement.

Yes. This is something that I love and really resonate with. And again, it's something when you have clients that are EMF sensitive, I'll just say they're also very sensitive in crowds.

And I think people they're not always aware of, you know, our energy, how far it goes out and that everyone is in it. And then there's this concept of quantum entanglement.

Do you want to go into that a little bit. Sure. So I mean quantum entanglement is still something that most people can't even imagine that this works.

Philip's Background and Path Into the Work

But, you know, just a reminder, in 2022, the Nobel Prize for physics was awarded for work on quantum entanglement. So it's not. So. Conserved. And this is actually an ancient concept.

And we've been able to take it to a new level though. So we have built a company called Quantum Upgrade. And since 2022 we've been offering this subscription service where you can sign up yourself or your home or your business or your pet or your car, and you get a customized quantum field which is over distance.

So literally you don't have to have a physical device for that. You're in the field the moment you sign up. It takes up to five minutes, and then you are in the field and then you can book in specific frequencies.

You can change the energy levels to higher to lower. You could even positive at any time. However you want to do it. And all you need is a browser for that. So you know any phone, any smartphone, any, any laptop to just change the settings.

And it's like your Netflix subscription, so it's easy to sign up. And then if you want to change the program or the movie you want to watch, you just change it there. Right?

And that's pretty much the same thing. You could change it from, Olympic performance frequency to a brain support frequency or to a common rest frequency or prosperity frequency.

All these different things are available to you, and it's very, very powerful. You know, you couldn't charge actual objects with it, right? So you could not put your silverware in there or structure your water, but for your own bio field, it's pretty much as powerful and as flexible as it gets.

And everyone by the way, can try it for free. Oh, and maybe I do this here now for your listeners. So with the code Filip 15 and that's Filip with one L and 2P15, you get 15 days for free and you don't even have to provide a credit card.

Oh great. Yeah, yeah. Everyone should try that. Quantum upgrade dot I o is that by the way. Okay. So how how did you get into this. Yeah it's a good question.

So I used to be in telcos. I was a vice president at T-Mobile for several years, international and then at T-Mobile US as well. And that was how I learned about electromagnetic fields, obviously.

Lyme, Parasites, and Blood Studies

Then, in parallel already in the early 2000, I got really into meditation and, and yoga and learned what's possible with energy healing techniques. I myself got trained in shamanic healing practices and and parcel of regression work and things like that.

And then the last thing happened that my ex wife, she got diagnosed with chronic Lyme disease in 2010, and that was sort of the spark for me to figure out, wow, you know, that's really my passion to help people, you know, with with this and to find new modalities that actually work.

Yeah. And that's pretty much where I then went in. And then I got all in in 2016, 17. And then in 2019, I launched LiDAR quantum Tech. And then in 22 quantum upgrade.

That's pretty much the, the yeah, the red line. Yeah. Exactly. So that's interesting. So as somebody who again, a lot of us get into whatever we're passionate about from something personal.

So a lot of my clients have mold and Lyme myself as well. So some of these products were to help with Lyme. So indirectly I guess. So, yeah, I need to be really careful with medical claims.

Obviously, you know, that's okay. And we'll we'll get to that point though. So just in general, like if someone who has a blog, for example, you increase the vibration significantly.

And so what parasites and Lyme and so on. Don't like is if the vibration is yeah, positive and high because yeah, it's an environment they don't like at all.

So just by that they start to degenerate. They start to have a harder time. And everything else you're doing in order to combat them will be much more effective.

Right? Right. It's as if you are fighting an enemy in the dark that can see. But now if you can also see, you have an advantage. Right. So that may be an analogy that people can relate to.

But then with the quantum upgrade we specifically also have developed the frequency for Lyme. We have not publicly launched it yet. It's available currently only in beta testing.

But we already know what it does. It's also already complete. And, there's a study, in Pennsylvania that just started

a couple days ago, specifically with Lyme disease patients.

Amazing. Yeah, yeah. You were you had showed some slides with parasites. Right. So you have done testing to show that how this is helpful with that. Yes.

So that was the BSA Institute in Austria. And they ran multiple randomized double blind trials. In regards to live blood analysis with our technology.

And usually they look just at, you know, red blood cell clotting. And they found significant declining. Right. Even a reversal of stage two of blood clotting within ten minutes, activation of white blood selectivity and all of that.

But then they also found in one study I read, they found someone that had an 80% reduction in parasitic load in 15 minutes. And I was like, that's really interesting.

And so what about these other ones? And then, yeah, I mean, 80%, I think that's as good as it gets. Right? That's probably the absolute best case scenario in 15 minutes.

Right. That's probably really an outlier. But I said could we run a specific study regarding that. And so they did that also was with a control group randomized double blind.

And they found, I think it was a roughly 40% reduction in parasitic load. And in a lot of other areas in regards to the the positive environment, of the blood, the blood so much improved that parasites had such a hard time to thrive in there.

Yeah. And I think it was a six month study. And so that was a significant improvement across the board. While the control group got worse in these six month.

That's very important to know. Right. So the lift was actually even. Even oh. The control. More different like a bigger span. Yeah. Yeah. And again it's always and I always am looking for things where we're not having to take more supplements.

And again, a lot of people react now everyone's becoming more and more sensitive as the complexity of cases is just growing. Yeah. And so when there are things that we can implement that are easy to either wear, have near you.

Yeah. It's just it's really wonderful. Yeah.

Nervous System and EMF Stress Research

I would say this is like your general thing, you know, to to optimize your energy levels and to protect your bio field because our bio field is under attack, you know, there's no doubt about it.

And since it helps with your body functions in general and also with absorption and all of those things and bioavailability, of supplements. Right. So then everything else you're doing works even better.

And we also don't tell people, for example, when we talk about the parasitic load study. Right. I never tell people you know, just do this and don't do your regular parasite because I think it's great.

Do your regular parasite cleanse, but you'll start at a better point. Yeah. If you do this and it will be done faster and they'll be more effective. And and that's how I look at it.

And you had mentioned a bit about HCV, right. So a lot of the things that we see are dysregulated nervous systems. Everyone's extremely stressed. And there's a big talk about how you just need to do nervous system work.

And it solves everything. Right, which is to me, not the full picture, because there are a lot of toxins and things that need to be addressed. But it's a big piece.

So how does that fit in? Because I think you've done a lot of studies on HIV as well. Yeah, I mean, the nervous system reacts to a lot of, stress factors, right?

And a lot of the unseen. Yes. You know, stress factors. And we've seen significant improvements in RV's. So the recent brain studies that were done, they also always measured the RV, during that time.

And so they had a baseline and a completely electro smog free environment. Then they exposed people to a 5G phone, a 5G phone call, actually, with the iPhone 15 or 16 right next to the ear.

And obviously the brain, you know, got almost fried. It's it's terrible to see. And the RV got destroyed as well. And then you see our technology come on.

And you see that the RV significantly improves and you see that the brain completely stresses and even the also activity in the limbic system, we were able to increase it by 13 x.

Right. And that's yeah that's massive. So that is what we see. Then there was another study done by the Eagle Institute with this capsule that's, that study was done already a few years ago, and it also showed significant improvements in HSV with every participant, that was impacted by electromagnetic fields.

And then they kept the electromagnetic fields active. They wore the capsule, and it improved. And then they even tested it over a few days. I think they tested instantly within ten, 15 minutes.

That was an improvement. Then after a day, the improvement was even bigger. And after two days, the improvement was even bigger. So not wearing it at night though, right?

Yeah. So one last thing I wanted to ask about, since it's a big issue for a lot of people, are the electric cars. Yes. And what have you seen and what do you have to help people when they own one and are in it?

So I would say everyone that claims that there are no electromagnetic field issues in electric cars is either a liar, ignorant, or just doesn't know it yet, right?

So better do your research because people develop chronic migraine, some that and other health issues.

Electric Cars and EMF Exposure

You know, I don't even want to know the long term, results of having an electric car. You know, even if I am in an Uber that comes in, is and it's an electric car.

I mean, I make sure to really amp up my quantum upgrade, for example. So the exposure is way higher in electric cars than just in the usual settings because you're almost in a, in a cage, right?

And then you have all this electronics and you have the battery and then the longer you drive, the worse the exposure gets. And then you have this cross amplification if you're also on your phone, right.

Or if you have a passenger, maybe two that are also on their phones. So then you have suddenly a real rough EMF soup. It's an EMF goulash at that point, I think.

And then, you know, what do you do? Right? And then the worst scenario is when you charge your batteries. I think people intuitively already leave the car when they charge the battery.

But if someone doesn't do that, like, get out of there. Yeah. I mean, you can use our tech. So our tech has been shown, to neutralize all of those negative effects and even the electric cars.

The base institute tested all the different organ functions tested to really bad deregulation. When they got an electric car. And in all these stress situations, and then with our technology, it was able to get into completely green states and completely regulated state for each of the organs.

So that's quite positive and helpful. And it would help you also, in an airplane, by the way, because in an airplane you have high exposure as well. Yeah. Very much so. Yeah.

Well thank you so much. It's been a pleasure. And I think it's just really important because, you know, a lot of people feel helpless to the things like this that are around them that it just seems like we can't escape, but we have tools to help. So that's great.

So much for studying this and doing the studies really.

Closing Remarks and Podcast Outro

So we can see this because a lot of things are out there. But that's really the big difference. Thank you. Sure appreciate it. Thanks for listening to the The Longevity Leaders podcast.

A Longevity Leaders community is on mission to transform 100 million lives by 2040. If you enjoyed the show, please share this with somebody that you know, especially another doctor or physician, but also click that follow button.

Until next time, stay strong and live long.
