And one thing that we are seeing as a major source of concern today are two chemicals that are becoming more mainstream, but they're still swept under the rug.

And we're talking about microplastics and forever chemicals. And the scariest thing is your cookware might be the biggest source of them. Most nonstick pans today release forever chemicals and microplastic particles when exposed to heat when we scratch them, or just simple daily use.

You can't see them, can't smell them or taste them, but those particles end up in your food and in your body. And once inside, they just don't pass through.

They build up silently, accumulating in your organs and tissues. Emerging. Science actually links forever chemicals and microplastics to major health risks, including significant risk of cancer development like breast, kidney, testicular cancer.

In addition, we're talking heart attack and stroke, liver damage, hormone disruption, fatality issues, immune system dysfunction, and chronic inflammation that is pretty much linked to everything nowadays, including obesity and diabetes.

And so if you're trying to live a cancer free lifestyle, you need to make sure that you're not undoing years of healthy lifestyle choices by what you're cooking your food in.

And that's why we're really excited to be partnering with Chefs Foundry, because they make a microplastic free, forever chemical free cookware that my family personal uses, and we love it.

The P600 cookware set, crafted by Swiss Engineering Nonstick Ceramic Coating, is 100% free from PFOs microplastic leaching chemicals, and this is one of our favorite pots.

No microplastics, no harmful forever chemicals, no toxic fumes. Just clean, safe, high performance cooking with the last lid and a removable handle which makes cleaning and storage so easy.

It's what my family and I use in our kitchen, and we have for quite a long time, because protecting your family's health starts with even the smallest choices, like what you cook on, the P600 offers a ceramic surface that cleans easily without dangerous nonstick chemicals.

Removable handle I just showed you for easy storage works on stovetop, including induction open oven safe for seamless stove to oven cooking, and today, when you purchase now you get 50% off, plus $39 in free gifts, including this soft touch silicone.

No, it's not toxic black plastic. This is nontoxic touch silicone, soft touch silicone to protect your pans, and a silicone trivet to shield your countertops.

All 50% off, all because you're part of the Cancer Breakthrough Summit. Trust me, your health and the health of your family are too important not to look into something like this.

So please give it some prayerful consideration and a huge thanks to Chefs Foundry for sponsoring this event, or else we wouldn't have been able to provide this life transforming, life changing information to you.
