Liver Disease Often Goes Undetected

Dr. Denise Warden and Her Research

all right this may sound like a strange all right this may sound like a strange question but is your liver happy would question but is your liver happy would you know it if it wasn't unfortunately you know it if it wasn't unfortunately probably not liver disease is a probably not liver disease is a worldwide epidemic and for most who have worldwide epidemic and for most who have it don't even know it until it's too it don't even know it until it's too late late late dr. Denise warden is repower medical dr. Denise warden is repower medical clinic and has dedicated her career to clinic and has dedicated her career to research and liver health research and liver health welcome to Sonoran living dr. Ward you welcome to Sonoran living dr.

How Liver Scans Revealed Hidden Disease

Fatty Liver, Fibrosis, and Cirrhosis

Causes and Risks Beyond Alcohol

Why Symptoms Can Be Missed

Treatment Results and Patient Improvements

Ward you so much I'm glad to be here Jerry okay so much I'm glad to be here Jerry okay so what did you find in this research so what did you find in this research you know it was really by accident I was you know it was really by accident I was looking I had a device in my clinic looking I had a device in my clinic called a fibroid scan that lets you it's called a fibroid scan that lets you it's an ultra shear wave ultrasound it lets an ultra shear wave ultrasound it lets you look at liver health to see if it's you look at liver health to see if it's fatty to see if it's stiff it's fatty to see if it's stiff it's cirrhosis and I said let me just check cirrhosis and I said let me just check my patients they had no liver enzymes my patients they had no liver enzymes that were elevated on blood work and I that were elevated on blood work and I thought well that's an epidemic let me thought well that's an epidemic let me look shocked at what I found really yes look shocked at what I found really yes so that's what's so scary is that you so that's what's so scary is that you don't know that there's a problem that's don't know that there's a problem that's right and this is type of do we call it right and this is type of do we call it a disease a liver disease because it's a disease a liver disease because it's it is liver disease okay so it's not and it is liver disease okay so it's not and it's not from from alcoholism which is it's not from from alcoholism which is cirrhosis correct the fatty liver is the cirrhosis correct the fatty liver is the one that you don't you just don't know one that you don't you just don't know you have well is it close it was all of you have well is it close it was all of those pieces are correct so you can have those pieces are correct so you can have fatty liver that can be caused by many fatty liver that can be caused by many different things obesity diabetes those different things obesity diabetes those all play into that but some piece of all play into that but some piece of genetic but the fatty liver if it genetic but the fatty liver if it continues to go gets inflamed now continues to go gets inflamed now we've got another liver disease and if it got another liver disease and if it keeps going now it's stiff now it's keeps going now it's stiff now it's fibrosis then it goes to cirrhosis we fibrosis then it goes to cirrhosis we know alcohol causes cirrhosis however know alcohol causes cirrhosis however there are other things that cause there are other things that cause cirrhosis viruses arsenic in our water cirrhosis viruses arsenic in our water there are so many causes nowadays that there are so many causes nowadays that we just don't even know so I have young we just don't even know so I have young thin patients no reason for me to think thin patients no reason for me to think that they would have had a problem with that they would have had a problem with their liver and they did okay and here their liver and they did okay and here is the problem then you don't know you is the problem then you don't know you have it it continues to worsen the only have it it continues to worsen the only alternative is a liver transplant it's alternative is a liver transplant it's at that point eventually right at some at that point eventually right at some point and many of these cases I'll say a point and many of these cases

I'll say a big percentage of the cases at that end big percentage of the cases at that end stage turn to liver cancer that's stage turn to liver cancer that's frightening all right I want to look at frightening all right I want to look at some numbers sure you have to kind of some numbers sure you have to kind of kind of explain to us what we're looking kind of explain to us what we're looking at here this is part of your research at here this is part of your research and what happens because what you've and what happens because what you've created or what you found is is an created or what you found is is an alternative that is going to help cure alternative that is going to help cure people I'm gonna use the word I just I people I'm gonna use the word I just I can't say that word but you can okay can't say that word but you can okay what are we looking at what I can show what are we looking at what I can show you this is a male patient had again at you this is a male patient had again at no abnormal Labs no reason healthy no abnormal Labs no reason healthy athletic he right there on that number athletic he right there on that number on the Left 279 that is a fatty liver a on the Left 279 that is a fatty liver a significant fatty liver and on the right significant fatty liver and on the right that 8.9 that was showing that he had a that 8.9 that was showing that he had a very stiff fibrotic if not cirrhosis in very stiff fibrotic if not cirrhosis in his liver one injection this is what we his liver one injection this is what we got 181 is a normal amount of fatty got 181 is a normal amount of fatty liver that's a normal liver 3.5 almost liver that's a normal liver 3.

A Case Study of Autoimmune Hepatitis

Hep R Injections and Clinic Information

5 almost back down into in fact from 3 to 4 as a back down into in fact from 3 to 4 as a normal server so he went to normal normal server so he went to normal extremely high exactly in one injection extremely high exactly in one injection okay and this is what we're talking okay and this is what we're talking about today this is a natural injection about today this is a natural injection yes that you do and and so far you found yes that you do and and so far you found that it's one injection and for some that it's one injection and for some patients one injection and I will say patients one injection and I will say for most one injection actually takes for most one injection actually takes them from severe into less severe and them from severe into less severe and how long does it take to get them to how long does it take to get them to normal everyone's a little different I normal everyone's a little different I don't have enough data yet but I can don't have enough data yet but I can tell you out of 35 40 patients that I tell you out of 35 40 patients that I did this on there wasn't a patient that did this on there wasn't a patient that didn't get better that last slide that didn't get better that last slide that went by quickly I just say those went by quickly I just say those autoimmune hepatitis on her way at some autoimmune hepatitis on her way at some point to a liver transplant in for point to a liver transplant in for injections she not only there it is she injections she not only there it is she not only went from cirrhosis which we not only went from cirrhosis which we know what it was from as the autoimmune know what it was from as the autoimmune into a normal lever level her liver into a normal lever level her liver enzymes went from the 200s down into the enzymes went from the 200s down into the 20s which is where they're supposed to 20s which is where they're supposed to be and she lost weight she came to me be and she lost weight she came to me with a full body rash she said she with a full body rash she said she didn't come to me for her liver she had didn't come to me for her liver she had a full body rest that nobody could a full body rest that nobody could figure out and I said okay liver works figure out and I said okay liver works with your digestion your toxins we need with your digestion your toxins we need to look at your liver very quickly side to look at your liver very quickly side effects yes no known side effects with effects yes no known side effects with these homeopathic injections these homeopathic injections they're called hep r is the name of the they're called hep r is the name of the injection there's no known side effects injection there's no known side effects there's no contraindications no matter there's no contraindications no matter what medications people are on so it's a what medications people are on so it's a safe way for an either look repower safe way for an either look repower medical clinic that's where you will medical clinic that's where you will find doctor word she has two locations find doctor word she has two locations for you to choose from one in Scottsdale for you to choose from one in Scottsdale one in Gilbert for 8 0 5 8 8 2 2 3 3 one in Gilbert for 8 0 5 8 8 2 2 3 3 learn more on our website dr. warden learn more on our website dr. warden calm
