How to Measure & Detox Spike Protein: Dr. Schmidt & Dr. McCullough Reveal the Test Transcript

(Transcripts are generated by AI and may contain errors)

Introduction and meeting Dr. McCullough

Hey, it's Dr. Schmidt. So I got to hang out with Dr Peter McCullough back in August, and I'm going to share with you some great information. is because many hospitals and clinicians will not order this COVID-19 antibody test.

And he mentioned about six universities and hospitals that will, it's like their policy, they won't recommend any patient get this test, he mentions cancer clinics, including MD Anderson, university hospitals, University of Michigan.

And the reason why doctors won't run this test is because they're culpable, because the demanded people get it and they push it so hard. And you remember some people lost their job because a refuse to get this shot.

So I learned about this and I actually was thinking like I got some patients that no matter what I do, they are not getting better.

Why the COVID antibody test matters

I contacted them and said, did you get the shot? And they said yes, I'm talking about two people and one of them did this tests and their score was eight thousand and you want that to be less than a thousand.

The other person his score, was over twenty five thousand, and again you, want, that, to, be, less, than, a, thousand And so it makes sense that no matter what I did with all my parasite cleansing and detox formulas usually getting great results you know, immune system supplements to calm down the immune, system Nothing was working.

I was pulling my hair out. It turns out they got the shot and this is why they're not getting better. So this isn't a very important test for people who got to shot.

And the cost is right there. Sixty nine dollars. You buy it right from this website. Its on demand. Lab Corp dot com. Search this this term right. There you add it to the cart right You make an appointment at LabCorp.

You get your blood drawn. So if you had the shot and you're sick, you got long COVID, whatever you want to call it, just not feeling good ever since then.

And no matter what you do, your not getting better. This might be the problem. Let me give you some notes from Dr. McAuliffe. We had a lecturer. He gave a lecture at this conference.

And this is what he said, we cannot get rid of the genetic code nor spike protein by the human body, because the body is making the spike proteins. That's what the vaccine was designed to do.

It directly causes blood clots, heart damage, etc. 5 to 15 years of worry post vaccine. So if you had your vaccine in 2021, then you have 5-15 years to worry about the damage that is causing.

75% of the vaccines cause no damage. And if get this test done and your antibodies are like 200, Then you're in pretty good shape.

Interpreting high spike antibody levels

I had this run, my antibodies were at 100. I think I got a mild form of COVID three times in those years. And he said

if your antibodies are 18,000, then you have a lot of symptoms.

I'll give you the solution at the end of this. He says the package insert for these shots Do not make the claim that the COVID shot saves lives. So it's a false claim if somebody says that this shot save lives, it doesn't stop infections transmission.

And the US government has been blocking any direct measurement testing of the spike protein. That's why he has antibodies. I do know somebody who's working on a lab test to measure the Spike protein directly.

When I get that information, I'll share that with you too. So if you get this result back and it's 5,000 or higher, then you have spike protein in your blood.

So he mentions curcumin, bromelain, and natokinase block the SARS-CoV-2, ivermectin, ozone, steroids, hydroxychloroquine do not clean up the spike-protein.

He made a product that has enzymes in it. Proteolytic enzymes go after the spiked protein because the sprayed protein is a protein. Proteolytic means protein-lytic.

It lysis, it cleaves, That's why enzymes are important to take if you have a high SARS-CoV-2 antibody test. So it's not really about the virus. The problem is an excessive immune response to the protein.

He mentioned bifidobacter, which is a probiotic, is key for spiked protein also. And they've done stool analysis and biftobactor should be 15% of the microbiome.

If you're concerned about this, then get a biffidabacter supplement also, so for the two patients I have with the really high, SARS CoV 2 antibody tests, I sent them directly to Dr.

Peter McCullough's website to go get his supplement that he designed. I'm not going to try to, you know, recreate his product. i'm, not gonna make my own product and try, to sell mine.

Just go and buy his. His website is TWC, which stands for the Wellness Company. twc.health. And then you look for this. It's called Ultimate Spike Detox right there.

Two pills a day. Empty stomach. and it takes one to two years. This is not a short-term thing. Okay, let's hear what Dr. Peter McAuliffe has to say. So this blood test of antibodies to the spike protein, in my view, is one of the most useful tests that we have in clinical medicine.

I think everyone should have at least one time a measurement of their quantitative antibodies against the spiked protein.

Recommended supplements and detox approach

You don't need a doctor to order this. Many doctors are reluctant to. Order it because of their culpability in promoting vaccination and the harms that have come from the COVID-19 vaccines.

This video is brought to you by my office. We use new and old clinical discoveries solving complex chronic illnesses using only diet and supplements. We have this fantastic building, we have multiple practitioners, and we do local and distance consultations.

We help you improve your health as opposed to just squashing symptoms. And we also have a variety of opportunities for you to get involved. Ebooks and courses that are free.

I have my large seven-step Blueprint to Optima Health online course, which walks you through the seven step blueprint to optimal health and you have access to all the supplements at patient pricing.

My book is available on Kindle. If you want to buy supplements from my office, we have this store which is for patients only, and we've this door which for everybody else.

But if you just want jump into direct care immediately, just contact the office directly. You don't need to rely on your doctor. You can get your own test.

In the United States, LabCorp, one of the most commonly used labs in the country, has labs on demand. So if you go to their website, and I'm going to show you this, you can navigate to labs-on-demand, then you could see in a middle there a COVID-19 antibody test, it costs $69.00, You could click on it, order it and pay for it.

and then go to a lab corp office in your city, get the blood drawn, and the next day on your portal, you will see the results that will come in on you quantitative antibody level.

And this is how you can interpret the result. Less than.8 units per ml means no exposure to spike protein. You've never had the illness and you've not taken a vaccine.

Very few people are less than 0.8. Less than a thousand means a low-level spike exposure, probably from the infection, maybe from a vaccine that's had a mild effect in the body, but less than 1,000 in every study shows.

Dr. McCullough explains the test and thresholds

a good outcome. Probably your problems are not related to the spike protein. Greater than a thousand, it's very possible that your symptoms or new problems could have a relationship to prior or current spike-protein exposure in the body.

And then after that, greater than 5,000 in research studies, we found circulatory spike proteins in bloodstream in people even years after COVID-19. vaccination greater than 10,000, 15,00, 25,0000, watch out.

In my clinical practice, that's where I see patients with heart damage, myocarditis, blood clots, neurologic damage neuropathy, stroke, Guillain-Barre syndrome, immune problems including rheumatoid arthritis and a whole variety of autoimmune conditions and then sadly acceleration of cancer, what's now termed turbo cancer.

So you can see how important this antibody test is. It doesn't change very quickly. So we advise people probably no more than once a year have an antibody tests, but it can tell you how much spike protein exposure or how current spike protein is in your body, even now five or six years into the pandemic.

The second most common question I get is, what do I do about high levels of inferred spike proteins in the human body? And there the go-to answer is the Ultimate Spike Detox from the wellness company.

Go to twc.health forward slash courage and look for the ultimate spike detox. That is only scientifically based, evidence supported, multi ingredient product on the market where in my experience, we've seen reliable reductions in spike protein antibodies and when measured spike-protein antigen in people who have had SARS-CoV-2 or taken the vaccines or both.

How to order the test and closing remarks

And I tell you, when that number goes down, it's a very good sign that you're getting better. And so you are going to want to check out the ultimate spike detox, particularly if your levels are greater than a thousand units per ml.

I'm Dr. Peter McCullough and that's my health tip for you. Okay, there you go. So you can bypass all the medical doctors and all of the BS that see on the news and opinions that people have.

Get your own spike antibody test run. Find out for yourself. Then there's a solution and it takes one to two years to bring those numbers down. using his product.

I hope this video stays up. We're saying a whole bunch of words that YouTube would have taken down within hours of posting even a year ago with the amount of censorship that we suffered from from the last administration.

So here I am posting this. Video I never would've done this in 2024, but I'm doing it now. Taking a rest, I could get a community strike on my YouTube channel and they always seem to have at least one on My channel all the time.

always a warning. There's always warning on my front page when I look at my dashboard. So, but I, you know, I need to do this. Here you go. Please take advantage of this, it's all available at your fingertips.

Okay, see you at the next video. Bye.
