Introduction and Interview Setup

Hey, it's Nathan Crane, director of the Health and Healing Club and host of the Conquering Cancers Summit. And today, I am honored and excited to welcome you to a very special interview.

I'm your host, Nathan Crane. I'm here at the Cancer Center for Healing in Irvine, California, and it is my honor to be sitting here with Doctor Jolly, who we've been talking a little bit off camera just about the extraordinary benefits and history that, this gentleman has with hyperbaric oxygen treatment therapy, working with from children to who were, you know, missing infants, infants, humans, wrongly infected with an Aids virus to helping people with cancer.

And so this is going to be a fascinating, interview. Make sure to stick with us, take some notes if you want to. And, you know, I'm interested in learning from you.

You obviously have so much wisdom to share. So thank you so much for joining us. Well, I really appreciate the opportunity to do this because it's always good to expand our area of knowledge.

Absolutely. You know, it's one of my greatest joys is, is the work I get to do is not only do I get to learn for myself, but then get to help and share that with others as well, and make an impact and a difference in people's lives, which you've been doing for decades.

Romania AIDS Baby Treatment with Hyperbaric Oxygen

I mean, you were just talking a moment ago that you're helping at the homeless shelters here, which is you know, it definitely touches my heart because, I've actually spent a lot of time over the years sitting and talking with homeless people and, helping homeless people and and teaching and educating.

I have some longer term missions to, to really help homeless people. And, you know, this isn't about this interview isn't just about homeless people, obviously, but it is just speaking to your integrity and your heart and your compassion in caring for those in need.

And, I can already tell I'm going to really enjoy my time with you. Well, I hope so you are. Share with me a little bit ago, over 35 years now, you first got into hyperbaric oxygen or oxygen therapy.

Can you talk a little bit about what got you there? It's about, almost 40 years, and, I was I was working with Doctor David Hughes in London, and he had called me and asked me to go help him.

And it turned out that a lot of babies in Romania were infected with the Aids virus. And they wanted me to go to Romania with them. And, I was completely like, what in the world am I going to do?

What's going on? I have no clue. And when you in medical school at this time I was, but I and I had to leave. But the doctors that went there were going to treat these Aids babies and try to heal them.

Yeah. They were they were infected, erroneously. There was the Aids virus that was put into vials, and I don't know how people were drunk or something, but this got injected into lots of baby babies.

And so we went and, Doctor David, you said we must use oxygen. Oxygen is magic. And of course, it is magic to keep this alive. But most people don't realize that oxygen is a drug.

It's an actual drug, and it's under the auspices of the FDA. Wow. And the reason it's a drug is because it's possible. And it does different things at different doses, and it fixes certain diseases.

And creates, acceleration of healing and all kinds of things. So I became an expert in that because I'm surrounded by these physicians who did it all the time.

And I'm in a foreign country. I didn't have anything else to do except every day, 24 hours, except for my sleeping time. Was absolutely just generating information on what to do, how to do it.

And I they say I became an expert. Yeah, yeah. And we had many, many healings and we had wonderful, wonderful results in Romania with the babies. What kind of results were you seeing started.

Well these babies were injected with the wrong the wrong stuff. They had this stuff in that they took the needles and took it out. It was, it was infected and it should have been a nutrient that they were given and they gave them Aids or the virus instead of instead of nutrients.

Yeah, exactly.

How Hyperbaric Oxygen Works

Wow. That's that's a pretty big mistake to me. It was a big panic in Romania. And, the president and I don't know who the what his name was. He, but I don't remember.

But, he went to Doctor Hughes and said, you know, we need help. We don't know what to do. And Hughes was a wild man. I mean, he he would take any challenge and work with it and usually come out successfully. Wow.

So I volunteered, a doctor from New Orleans Medical Center volunteered, and several other doctors. She was a female. Two other male doctors came and we all went over there and we had great.

Me so. Yeah. So. And how are you administering oxygen then? Well, we we started out just using oxygen masks. But oxygen under pressure is magnificent because we can put hundreds of times more oxygen into a body.

And that's why, downstairs in the center for New Medicine. Here we have hyperbaric department. Hyperbaric means higher than normal pressure. And when you have a gas under pressure, it will dissolve into a liquid.

So when I go into a hyperbaric chamber and breathe 100% oxygen, that oxygen is being multiplied magnificently depending upon the pressure because the pressure determines the dosage.

And magic can happen. I was involved in treating some racehorses, $7 million racehorses that had died. That's what the cost of each horse that had this infection was a flesh eating bacteria basically.

And they were going to die. And I said, no, they don't have to die. Well, what do you mean they don't have to die, but they don't have to die. Let's find that there's a horse chamber.

And if they go in the horse hyperbaric chamber, have 100% oxygen two times a day, maybe three times a day, we can get rid of the flesh eating bacteria. We did it while we did it.

How long did that take? It took, about six weeks. Okay, well, it probably took less, but we didn't test and save a $7 million horse's life. Yes, in about six weeks.

That's that's incredible. And it's not real comfortable. Yeah, because when you go under pressure, your ears like. Like in an airplane. Yeah, exactly.

But it's worse because the pressure is more. And then you learn how as a human being to alleviate that pressure. But the horses can't do that. So they suffer a bit.

But they live, they get rid of the problem. Yeah. And so it's very exciting actually.

Treating Infections and Saving Racehorses

And then of course we, we started doing it with people because they got the flesh eating bacteria, human beings, rather than cut off their leg. The first thing you try hyperbaric therapy.

And most people still don't know that. Very sad. Wow. And hyperbaric is not a treatment that's well known at all. And most hospitals have hyperbaric chambers, but they only use them for a few things, like, like, diving problems.

You know, when a diver comes up too fast and they have to go in the hyperbaric chamber and have the pressure change and go through all this oxygenation process, and it saves their life and brings them back to normality.

But it also does magic for so many other things. And, and my, the team of people I worked with are all in heaven now. I'm the only one left and that's sad because I can't get anybody excited and interested in doing anything because it doesn't make enough money for them.

So that's very sad right. Well hopefully our audience, which is tens of thousands of people around the world. Amen will be excited about, you know, learning more about hyperbaric.

Yeah absolutely. So tell us about hyperbaric and cancer. How does it help people with cancer? Well, we're we're finding out. We're still finding out. But what it does is it gets the body in much better shape and the immune system in much better shape to deal with the cancer and the which with the replication rate of the cancer also diet is very important.

Yeah. Because some of the things that we eat are killing us. Yeah. Sugar is an evil demon from hell. And I try to tell people that it reduces your immune system capability, and it does all kinds of crazy things to our body, and we're all addicted to it.

Yeah, we're all addicted to it. So we got to get rid of that completely in every way, shape and form. Even some foods that are carbs that convert to sugar.

We need to understand how to ingest nutrients. Yeah, without poisoning ourselves. Yeah. So I'm into that. But I'll tell you, people don't like to do it.

They want to eat what they eat. But because it tastes good, you know?

Hyperbaric Therapy for Cancer and Diet

Yeah. Unfortunately we have a society that, you know, we didn't learn about health growing up. We didn't learn about whole foods and natural foods and how to eat and all that.

We just had people starting corporations to make as much money as possible, with as much processed fast food as you possibly can, get people their food in and out and and make the money right.

And unfortunately not recognizing, I think most of them that that whole societal industry of this processed food market for convenience and ease and profitability, and mass production has also contributed to mass disease.

My opinion is that you are absolutely right and that people are dying every day. It's not need to leave this earth. Yeah, that's so true. It's so true.

And, and and if you if you look at the stuff that's put in some of the foods, and if we eat those kinds of foods all the time, we're gonna probably, I don't know, 20, 25 years.

They say, of dying early. That's not good. And then the problems that ensue, the medical issues that ensue, make it miserable for the poor patient. Yeah. And we keep eating the junk. Yeah.

So you gotta stop with the chicken. You gotta stop with the junk, right? Yeah, yeah, I putting the junk in. So back to oxygen. How does oxygen enhance the immune system?

So you can dose oxygen. For example, if someone has a terrible infection, we put them in the hyperbaric chamber at a very deep pressure, and we're able to increase the level of oxygen in their body so much that most disease processes cannot compete with it.

Why is that? Because that's what oxygen does. It's what, poison does to your ants that are crawling on the floor. You put the poison on them and they can't exist because we know that cancer specifically, right?

It it requires more of an anaerobic environment. Right. Oxygen deprivation, it will survive, replicate better, replicate better. So by infusing the body with more oxygen, you're making more of an Arabic environment.

Yes. And you're going to help slow down the cancer. That's correct. Yeah. Fascinating. Yeah. But you see it's not alone. You don't do that alone. Sure.

For example, sugar, I preach constantly. Sugar is an evil demon from hell. Do not eat sugar and don't eat the stuff that converts to sugar in your body.

Yeah. And, you know, the seventh day Adventists. I went to school for a while at Loma Linda, and, all of those people were so healthy and wonderful, and they ate in the cafeteria.

Man, all we ate was vegetables. That's the blue zone here in the US, right? Is that the considered blues on some of the healthiest? Yeah, all those people.

People in Loma Linda? Yeah, they're they're seventh day Adventist. And they all go to church together. And when I was, when I was there, I lived in an apartment with the people, I went to their church, I went to my church as well.

Plant-Based Eating and Healthy Living

I was very churchy in those days. And it was magnificent. And you ate lots and lots of vegetables. We ate everything was vegetables, but they made things like, magic things that we don't even know exist out of their vegetables.

Like. Like what kind of things? Well, like, we had, something like a meat loaf made with different vegetables. Okay. And, they, they put it in a machine, like, like a dehydrator maybe.

Well, that was the first thing. And then they put it in were grinds all up. Okay. And they make meatloaf stuff. Yeah. Yeah. And and they finally plant based meatloaf.

Exactly. Yeah. And it tastes wonderful. Yeah. And they don't just feed you carrots and potatoes and whatever. And a lot of people think vegetarians are so bored.

They're not bored. They have more pleasure eating than we do. My wife and I and our kids, we've been totally vegan, plant based for well over ten years.

And look at you and I'll tell you what, we get to enjoy a plethora of all kinds of delicious foods. Absolutely. And my comment would be, nobody would ever believe you're 82 years old.

Exactly. I'll be 83 next month. Amen. Well, thank you so much. I appreciate your time. I certainly look forward to, you know, continuing to see more information around hyperbaric oxygen therapy.

And I hope people got some good information around it. Is there anything else about, you know, oxygen therapy that that people should know about? First of all, it's magic because it keeps us alive without it for a few minutes on oxygen, we have to have oxygen to live and breathe, right?

Yeah. And it's been declared a drug by the FDA because it's addressable. Yeah. Now, what does that mean? It means that different levels of oxygen do different things, and you can accelerate healing dramatically, dramatically by going in a hyperbaric chamber, which is a chamber that has pressure in it and breathing 100% oxygen.

Your healing level will increase dramatically.

Healing Severe Facial Trauma with Oxygen Therapy

And some people who would never heal. I have seen horrible accident. We had an here in this place. We had, in the center for New Medicine, a patient come in that was driving in the car and this big mess of metal came off of a truck, went through the window and completely destroyed her face. Wow.

And the plastic surgeons worked on her for four months. She came for hyperbaric therapy every day, starting with short treatments and then going longer and then going every other day for longer treatments.

And she's now a beautiful young lady again. Really amazing. No plastic surgery. Well, they did a little bit of plastic surgery, but I would never have done anything. Yeah.

Without that, the roots of healing underneath. Yeah. And the only way that happened. Oxygen. Wow. Yeah. And she was our patient. She she came here. She was at the Whittaker Wellness Institute.

And then when I came here, I brought her here. And she finished her healing here. And now she's incredible. Wow. Yeah. That's incredible. Well, thank you, doctor John.

I really appreciate your time. My pleasure. God bless you for everything you do. Thank you. Thank you for the passion and the love and the care. And I want to thank everyone for tuning in to the Conquering Cancer Summit.

Please share this with friends and family.

Closing Thoughts and Farewell

Together we truly can make a difference for the future of humanity in ending the cancer pandemic. Thank you. And I wish you ultimate health and happiness. Be well.
