MARCoNS Testing and Nasopharynx Swab

There's another bacteria that can also set up housekeeping in your nose. It's called multiple antibiotic resistant staph aureus or marcons. We ask that you come into the office to have this done.

If that's not within your current readiness and ability, We have you sign a Marcon's release and ask that you have a certified medical assistant, doctor, nurse, PA conduct this test.

Why? Marcon's lives deep within the recesses of our nasopharynx. So that means that we use this very small swab and go way back into the nasopharinx and collect the sample.

You need a medical professional who knows how to do this so that you will do no harm.

Treatment Options for MARCoNS

If this bacteria is living up in your nose, we have great ways to get rid of it, including ozone insufflations, nebulized biocidin, ozonated glycerin nasal spray, all kinds of wonderful ways to get rid of it.

But you want to Some exciting new ways that we're treating marcons and also actinomycetes in the nasopharynx, the mouth, other places are by using a nebulizer.

So we also have nebulizers here at Hope for Healing that you can purchase or we can file with your insurance with the right ICD-10 code. A nebilizer, this is a cute little panda.

Okay, now you have to use a mask when you do this, but we'll give you a prescription for sterile saline.

Nebulizer Therapy with Biocidin

And then you can take five drops of biocidin, which is a natural antimicrobial, and put it into the nebulizer cup. Now, a nebulizer cup, you screw it off and you put the saline in it and I'll take that.

So, cute little mask. And there's a reservoir, which is right here. That cup we put salene, the five drops, To put the mask on, it takes eight to 10 minutes to do a treatment twice a day for four weeks.

And then we retest to see if you still have Marcon's. Another way to treat Marcons is by using ozonated glycerin from Pure O3.

Ozonated Glycerin for Mouth and Throat

The other thing is that if we've tested your mouth and you have actinose in your mouse, you can also take an extremely small amount of the ozinated glycyrin gargle with it, collect a lot of saliva, gargle and then swallow it and that will help get rid of the organisms that are inflammatory in your mouth or your throat.
