Introduction to peptide therapy

Keptide therapy is the most promising thing in the future of healthcare, especially if you are in a traditional Western monocle. Now, it's been used in holistic, integrative, therapeutic approach for a very, very long time, but now it is starting to become mainstream because of some big names.

because pharma is trying to get involved in the peptide game.

Why peptides have been hard to use

Here's the problem with peptides and why many of you have not been using them and while they've been dominated by the biohacking community and the bodybuilding group only, because it typically is going to require a needle and a lot of people don't want to deal with that.

And what you to do is get a vial of some raw powder, basically the Peptide, And then you get your reconstitution, bacterial static water, and you have to draw it up and combine it and mix it, know the formulas, you know what needle to get, what dose, then inject yourself, sometimes daily, weekly, twice a day.

You gotta know you're doing with whatever it is you are doing. This is where a lot of people check out and say, I can't do it. And you've had no access to this.

Typically, it's been through compound pharmacies, a few of them, and research companies. So it not being sold for you to use for health purposes. It's for research purposes only.

That's how this has been going on for a very long time. Now you know. Because peptides are typically too difficult to pass through the digestive system, we've been limited to this.

Oral peptide delivery and capsule options

We have a view we can use sprays up the nose, but there are some that you can take orally in a capsule form or a spray form. And a few companies have gotten good and patented some very unique processes that allow things that traditionally you only could do this way to now be taken orally.

There's only so many, and I want to tell you about one right now. I'm going to slowly be educating you. Here's one that I personally take. Capsule. Easy to deal with.

Thymogen Alpha-1.

Thymogen Alpha-1 benefits overview

Here's the bullet points, slows the aging process, improves GI barrier function, AKA leaky gut, boosts physical and mental endurance and your ability to handle stress.

Improves immunity and hastens the clearance of infections. It's a very potent synergistic blend of orally active immune modulating bioregulator dipeptides.

immunosuppression of inflammatory disease. Okay. Now let's get into the details. What has been done here by integrative pep is that thymogen with the immune peptide A2, IPA2.

Those two have been combined in a synergistic blend and it has immune modulation and this is a bioregulator. There's two peptides in thymogen and two in IPA-2.

How Thymogen and IPA-2 work together

So those are dipeptides, so you have four amino acids put together, right? This has been specifically designed to replace and it even outperforms the peptide thimosin alpha-1, TA-I.

It's been shown in numerous clinical trials and metabolic testing that the thymosin and IPAs are more potent and beneficial than thimosin-alpha-one, T-A1.

This is stronger. stronger antimicrobial effects and a stronger influence on morbidity, mortality, and multi-system deterioration seen with aging. That is senescent cells.

It's especially effective in supporting the immune system and it deals with that by normalizing the absolute counts of T and B lymphocytes. Enhances your thymus activity and increases the white blood cell count and activity among other things.

So we're improving immunity and homeostasis associated with infections, and it also helps clear those out for ones you know about as well as those stealth infections.

Health applications and ordering details

I'm always stacking this into any detoxification or any protocols that I am very specifically targeting something. So individually, thymogen deals with improving things and clinically shown to improve the conditions such as cancer, aging, stress-related immunosuppression, inflammatory disease, chronic infection, uterine diseases, tissue repair disorders, and autoimmune disease.

IPA2 has been shown to improve symptoms of aging and reducing cellular senescence, those are the zombie cells. It also optimizes GI function, optimises coagulation to avoid those clotting disorders and is associated with a significant reduction in the incidence of cancer.

Those two stacked together are outperforming each one of those by themselves, and you don't need a needle. We offer a significant discount by dropshipping it to you, you do not have to come into my office, we just get you to complete an order form.

It will help you select which one might be the best one for you because we have a few, but that's what this combination is doing,
