Introduction to Quantum Longevity

Welcome to another episode of the Exponential Longevity Summit. I'm your host, Doctor Jeffrey Gladden, and we're here discussing leveraging AI to outlive disease and living for a lifetime.

And today I'm joined by Todd Shipman. Todd has a history of working in the longevity space. He's worked with several different companies that are doing cutting edge things, and he's actually working with a company now that I find fascinating and has to do with really quantum energy, quantum tech, quantum technologies.

It's a little it's a little interesting to try to wrap your head around this, but we have several companies that are working in this space, and we'll talk about that.

But with that, Todd, welcome, welcome to the show. Yeah. Thank you very much, Doctor Glenn. Yeah, it's good to be here with you. So tell us a little bit about your journey.

How did you get to, to be in the middle of quantum medicine? Well, that's not something. That's not a place everybody ends up. Or maybe we all end up there, for that matter.

That may be the case. Yeah. Well, I think it's it's part of a lot of people's path from on what we're doing. And I think a lot of people in the longevity space, any type of biohacking space can tend to relate to how we get into this, whether it's from disparity or curiosity.

And for me, I was a competitive ultrarunner, with balancing children and everything and trying to figure out the most effective way to, you know, enhance my performance, enhance my recovery, while trying to train for all these things, 200, 200 mile ultramarathons, while again, having kids and just finding things that went along and through my path with that.

At one time, you know, I was just really, I use my social media platform as a way to say, hey, does this work for me or not? And just kind of post my journeys with things.

And, I started doing that and really extreme levels. But one thing I found was this quantum energy and my initial thought, and that's why I really am passionate about this stuff, cause my initial thought was like, this is as woowoo as it gets.

Todd's Journey into Quantum Energy

And I'm going to debunk the heck out of these people, you know, and that that was how I got into it, because I started and I had done it with this, basically was originally a necklace that was around, and it had all the micronutrients, everything in it.

So I was a very monotonous eater. And I went and got all of the, you know, spectra cell micronutrients, got my blood work done for, a little over like six months straight to get like a basis.

And then I started wearing the necklace. And after 40 days, I started testing and all my numbers, like anything that I was deficient and everything became optimal.

And I took those tests for about a year and a half straight, and it was really like, there is something to this, whether, you know, it's a lot of things where I can really appreciate the people that are very skeptical about this, because I was very much on that side.

And still to this day, you know, that was about a year ago and still this day, I'm constantly surprised, like, you know,

I'm not surprised, but I'm always surprised, like, oh, wow, we're finding out because it's constantly with with what this pure quantum energy is.

It's the constant. Like, what else can I do? Well, what else can we do? Because no one really knows. You know, a lot of people are just looking to say, well, what else can we test?

Like what else can we find it into it? And, that's there's we're constantly finding new things. We're doing all these studies like from the quantum tech, we have over 60 placebo controlled double blind studies, that are like just a wide spectrum of what those studies were for or whether it's for like food allergies or fertility increase.

And just, you know, the basic other stuff that we have, but it's all like, yeah, it's really an amazing thing. Yeah. Let's it's an interesting story. I think, to your point, people get into this space from either aspiration, desperation or just curiosity.

Right. And I think it could and puts, puts, pushes people. And there could be a combination of those, that pushes people towards this. But let's talk a little bit about quantum medicine, because, you know, we tend to think about medicine as being biological.

And yet biology is actually a quantum process. So quantum process has to do with, you know, what happens in the subatomic particles of, of atoms. And it also has what it has to do with atoms themselves.

They behave at the microscopic or at that atomic level. Things are happening differently than they are at the macroscopic level. Right. You hit a baseball and it flies a certain distance, what with at the quantum level, if you shoot out a couple of electrons and there's some slits up ahead, depending on how you observe them, they may go through as a wave function or as a particle function.

And so there's some things happening at the quantum level that kind of defy traditional perceptual logic. And, you know, when you start to think about quantum biology, for example, one of the first things I read about in quantum biology was photosynthesis.

So you've got a plant with leaves, and it's collecting sunlight. And the way that it actually optimizes the production of glucose from that light is a quantum is a quantum process.

The way that it's adjusting the chlorophyl and the interaction becomes a quantum process. It's not just a oh, here's an incoming thing that turns into that.

We just take light a photon and turn it into that. There's a whole quantum process that's going on there. And that was my first introduction to and I thought, wow, that's really, really cool.

And then I heard about it again through the through the ness people, maybe you're familiar with them where they're using info ceuticals to affect fields, energy fields at a quantum level.

And then I heard about your company, Layla, and what they're doing. And I was I've been skeptical at every turn. Right. I've been skeptical at every turn.

And yet, when you start to get into this, it's really pretty fascinating. The last company I've heard about is, yes. I don't know if you're familiar with that, but you said you sit in a quantum field that's actually radiating, and you can feel it interfacing with your own cells.

It's really quite dramatic. So if you're listening to this in your skeptical, we get it. We're skeptical. We were skeptical too. Until you actually start to play with this.

So knowing that this is actually real, talk to us a little bit about, you know, what you're seeing, you know, you've done all these studies. What are some of the what are some of the things that you're seeing that are impacting, let's say, longevity metrics or things like that?

You talked about fertility and some of these other things. So there's some other things that are directly related to longevity. Yeah. So I mean we we have like I mentioned like a vast variety of different studies.

How Quantum Medicine May Affect Longevity

And these go from like check things to like improve our of course our like bio energy markers. We see the, exposure to this pure quantum energy increases heart variability or heart rate variability.

We get an increase of white cell. Our white blood cell production, increase of ATP by 29% was one of our more recent studies that we came across, which is really cool.

It expedites wound healing. And it just kind of a good way to put this, I think, for other people. Doctor Glyde, too, is like with, with quantum energy and like when you would have this like bio field, right?

So some people may not recognize it as biofuel. They might look at as or prana, lifeforce energy. And what the quantum energy like, especially with our products are designed to do is to basically it puts our body back into the natural state as if we are and this might be extreme example, but let's say like, let's just say we're out in the middle of a national park.

Yosemite. Right? Like with no cell phones or anything like that. And we're just in a, a peaceful environment, but there's no external, not too many external, environmental like stressors.

And that is what our products are kind of replicating. So, things that are also where I was one of those studies, but for like EMF. So our most of our products are the pure quantum energy.

It does not block EMF. So I just want to clarify that, but it will neutralize the harmful effects that EMS have on our body at like a biological level.

And we can show that again with bio, biomarkers and everything. So like it's it's blocking the stress. Like, you know, EMS calls cortisol. Cortisol kind of ages us of stress.

And that's where our products are kind of like, they bubble wrap us from, external like environmental stressors. Right. So that's where we're seeing like, all the benefits for longevity.

Yeah. No, that's that's great. So talk to us a little bit about the products. I know you've got necklaces. I know you've got cards. I know you've got cubes that sit in the middle of a of a desk or a room, of different sizes and varieties.

Talk us through a little bit. If somebody has a and you've got things that are focused on different, different health issues, like different cards that do different things, different, necklaces that do different things.

So it can be almost a little confusing or overwhelming for somebody to look at it and say, okay, well, what do I. Absolutely. You're right. Because some of the products are not, you know, they're not $0.50 to buy one.

And, and yet, you know, you want to make the investment wisely. So help guide us a little bit. How do people navigate that? You know, that's a great question.

And I always suggest because, yes, some of our products are definitely an investment. We have prices up to like $1,800. If you double that, you know, for some of the products, what do you want to have them for?

Upgrades. But, I think a fair investment for people to really just kind of be introduced into quantum energy and, you know, to feel it or experience it is kind of like our capsules.

Our capsules range anywhere from like $75 to very more basic ones that are like hormone, and hair, nail, skin health features. And then we have, all the way up to $145 for like our more popular Hugo capsule.

And I always wear them regardless. So, it's really small, and it it has, it's, it has these titanium spheres inside, and that is what's charged with the pure quantum energy.

And now the brass, the part that you see now, that is what is charged with the frequencies, the frequencies in that one can be things like, you know, 80 plus, micronutrients that are in there.

It helps structure water and in different, certain frequency so that this is the product that I always suggest people get, just because it's, it's, I mean, it's $145.

It's not like insanely cheap, but it's also one of those things where you can see, and try it out and see that there's something to quantum energy. And one thing, though is, is I would say for sure the majority of people will actually be able to experience and feel it.

But that also being said, one really cool thing about our studies that we've done is it shows that you will have all these benefits. Where do you feel or not?

And one thing, Doctor Glenn, that I think is very interesting, that there studies that shows that it's not like we can say something like, oh, 60% of people experience these benefits.

It is 100% of the people that do this with are double blind placebo. So it's not a, oh, hey, 83% got, you know, this stuff. It is 100%, which is fascinating to me. That's fascinating.

That's almost. So even if you're not, it's yeah. If you're not experiencing it, you can still go look at the studies and show what you're going to be, what you are benefiting from.

So but that being said, there are quite a few people that when they get these capsules, there's five spheres inside it, and some people are like, it's, it's it's too intense for me.

So we have them removed, some of them and, you know, so really depends. And so that's the most popular. We also have frequency cards and they kind of look like a little credit card.

They're metal. And we have about 30 plus versions of that.

Quantum Products: Capsules, Cards, and Blocks

So you can get them with like gratitude. You can get them with, inner peace for better sleep. We have DNA cell receptor, our protectors, which kind of help, after post Covid and getting jabbed.

Because a lot of these things can also help. One thing that we see is it makes your blood clotting go away, so it makes your blood more visceral. So we see, a lot of benefits with that.

There there's a large variety of different frequencies that you can get on the cards. We do have the blocks, and the blocks are definitely a little more on the expensive side, but they also, they're way more like utilizing things so you can make your own frequencies at that time.

So we have certain blocks where you could take all your, your supplements that you have in your medicine cabinet and put them on something metal, anything that's metal.

So your jewelry, your necklace rings, watch things like that. Like you can put those in there and it'll transfer over the energy to those, or the frequencies.

So, we also have them that can charge food, things like, fruit and stuff change really different because you're actually enhancing or structuring the water.

So when you're eating that fruit, you'll tell a difference. There's, there's a store called Semi-Automatics and they're

actually in California. There's also some in Florida and Texas, and they're a smoothie, civil Place.

And they have blocks in every single one of their places, and they charge all the smoothies and bowls before they go into the customers because they see it enhances the flavor.

So there's a lot of things you can do with the blocks. But in general, they also just harmonize your space like your entire house. So it's not something like the capsule which goes about, you know, maybe 4 or 5ft outwards, but the block can go like upwards to, two kilometers, depending on which block you have of ours that will actually harmonize the location from, EMS.

So that's tends to be one of the biggest reasons, you know, to have a block. We have small ones. So people are in their Teslas, and you have lots of studies showing about what, our blocks can do to protect someone who's in a electrical vehicle.

And, so we see a lot of these people will put, like, a block inside, their car, you know, Tesla or anything else. We have small travel blocks, so you can take that with you and travel with it.

And, whether it's in your car or when you're out traveling, you can do it to help with your food at a restaurant and help neutralize the negative effects of things like sugar and gluten.

Anything that's pretty harmful for us with food. Yeah, no, it's pretty interesting. It's interesting that you're getting 100% improvement in people that feel it or don't feel it.

What I found and discovered is that people, some people are sensitive to energies, and other people don't really sense the energies the way other people do.

So, for example, with the necklace that you're talking about, it comes with these five, they're almost like big boobies. So if the audience wants to kind of picture what they're like, they're bigger than a baby, but there's they're circling around, they're titanium, they're charged, and you put it into the little, it's really a little capsule with a screw top, and you drop it in.

He just showed you that. But what's interesting is you can put in one and you can wear it around and say, oh, I don't feel that much. You can drop in a second one, wear it around.

It's like, I think I may be feeling a little something or dropping three, so like, oh, wow, I'm not sure I want to wear this with three in there. Right? It feels like almost a little funny. Right?

So you back it off to two and it's like, oh, two feels right for me now. And over time, I suppose you could build yourself up to three or 4 or 5. But what you're saying, is it doesn't really matter if you're at 5 or 2, you're getting the benefit if you're getting the benefit.

Am I correct in saying that? Yes. Yeah. It's true because the, basically what it's doing is it's just intensifying the, it's intensity basically of the, the frequencies that it's like outputting in between outward, but it's, you can have 1 or 2 in there.

And that's why we also tell people not to wear it at night or close to that, because it can be a stimulant. But, it's also not even a stimulant. It's really just, again, our body being protective in its bubble and it's its own natural energy in a way, too.

So yeah, that's it's. Helping that. Thing. Yeah. These cubes that he's talking about, they're cube shaped but they're not solid. They're actually hollow.

So it's basically four four posts a top and a bottom if you can imagine that. So it's really more it is cube shaped but it's really a hollow structure.

So due to his point you can set something inside of it. You could set it. You could set water inside there or set an apple inside of it or you know, put your.

Body parts. You could stick your body parts there depending on, you know, what size your body parts are. You can't get your leg in there necessarily, but you can get your hand.

Well, we do have the ground. We are we have, like, a grand block. Doctor Gladden, which you and your whole body and from us know. Well, you can you can I even at me at like six foot one at least.

I can lay in it now. It's not like it's it's big enough to put like, two grocery bags of, like, food back then, I'd say. All right. So it's expansive enough to, like, you could get in there and have your entire chest under or your hips.

What do you guys. Think about what do you guys make a bed frame right. Yeah. That's I've been poking Phillip for that for quite some time. Right. And I think that's probably the number one question is to have like a med bed.

Right. Basically, I really would love to see something like that. I, I don't know the hesitation with Phillip on that if it's just logistics. Yeah, but it's short.

Yeah. It'd be expensive I suppose. Then it'd be hard to ship and heavy and all these. So there's lots of lots of logistical issues with it. More than, more than, But I would love to see like, facilities full of facilities that maybe have better logistics and financial backing, that they could be putting these in their, in their places for, for, clients to come to.

So that would be my idea of who could utilize it if not everyone can, you know, financially on a tangible level, pick it up like a med bed would be. Yeah, very next level for us.

So where do people find out more about this? Where do they go to to learn more about you? What's your website? I'm sure people are going to be interested to see, you know what might be right for them?

How do they navigate that? Do they is there a questionnaire or a quiz, or is there they just show up with their symptoms and you walk them through what each of these things do, what when you look at the website and I've been there and I have, I have I've had the I have the cards, I have the necklace, I have the cube.

So I'm familiar with it. But I can tell you in looking at it initially, it can be a little daunting trying to figure out what to actually get right. And so.

Yeah. How do you recommend people navigate that? Well, so Leila, Leila. Q like a cute ABC.com, would be the website. We also have quantum upgrade. Which is a sister company of ours.

It's more on quantum entanglement. And you know what I am more than happy to do is if anyone has any any questions. I'm very active on the social media side of quantum as well.

So you're welcome to reach out on to like, Instagram or Facebook. And you are welcome to ask any questions there. I will take all the time in the world to.

I have so much passion with educating us, and because I really feel like the better, more educated and more interested in how you can utilize these products, the more you will benefit.

So I will spend all the time with people one on one. I kind of figure out what their goals are and what they're looking for to help them. We also have a telegram group.

It's a private group, so you can find it through, again on social media. Well, if you like, reach out to us on Instagram. I'll give you the thing. But it's like there's probably like 8000 people in there.

And one thing I just want advice because, like, it's not technically our group. We don't it's not like us educating. It is

literally 8000 people who are all sharing their experiences.

So if you have any hesitation, you can get in there and ask questions like, hey, I have these goals, what should I get? And not just hearing it from me, but you'll be hearing it from people who have done their own experiment and are other customers.

Quantum Upgrade and Entanglement

You're getting their their input on it. But, I do understand this because a lot of this stuff is very overwhelming. A lot of the stuff in the medical world and the health and healing world can very overwhelming.

And that's where I kind of stem all my passion, because it's like people are actively wanting to find things that help them, but it's also the information can be just daunting.

So I'm always there to help people and help educate however I can with it. Yeah, I think that's great. I think, when you do go to the website, just looking up Leila, quantum tech right now, it's showing the different things that you have.

So if you go through it, you can actually start to navigate it and get an idea of what, what it is you want to get. But, and you can see if you go on there, you can actually see what these cubes look like, the various sizes, what the necklaces look like, various sizes, things like that.

So, I would export and then, if you do have questions, you know, you can reach out to Todd. He's making himself available. I find this whole area, to be really fascinating, how we're actually interfacing.

Not so much at a physical level, but actually a physical, a physics level. Right? We think of biology as biology. We think chemistry is kind of that's really kind of nuts and bolts.

But really when you get into this quantum space now you're working at a physics level. And I think the future of medicine is really to think about it in terms of physics rather than, biochemical reactions.

Right? Those are kind of the big boys on the block. And yes, they're all important, but there's something underneath there that's actually enabling all that to work properly.

And that's kind of what we're going below. You know, we'd like to go, we think in medicine or at least in this longevity medicine space, we like to think we're going, you know, to look behind the curtain, behind the curtain, behind the curtain.

And now when you're getting into this quantum space, you're looking behind another curtain to look at something that's going on. And that's what's incredibly fascinating to me.

And I think we're just. It's the most basic nature. Yeah. That's right, that's right. And it's kind of comes up from that. So super interesting. Anything new on the horizon for you or for the company that you're coming out with?

Besides, I bet that's not going to be made. Well it is poke Philip on that one a little more. But we do have some. So one thing we didn't really mention is that we also do have clothing.

And I know, I remember you said that you used to wear that on your podcast, so, like, you'd have the we would shrink because it's like when you're on the EMS and stuff, but we have t shirts, we have hats, beanies.

At like a week and they're super nice. And one thing I like about Philip, and crew is they're European. So they have really good style. So one thing I always and like I push away from like EMF blocking clothes is they tend to be very, you know, really screaming hey, everyone, look at me.

Look at me. I'm wearing something weird, you know, instead of, like, what I like to call, like, low key health living,

you know? So our our jackets, they're like Montclair style.

They look very nice. Our t shirts are nice. All that. And they actually do block AMS, so they're great for airplanes traveling as well. They are charged with quantum energy.

So that's kind of our our newer stuff. We have cool. Again I can go with more initially when you think about it. But our quantum entanglement company which is quantum upgrade and going back to physics, Doctor Glanton, who you mentioned is like, you know, the 2022 Nobel Prize in Physics was awarded on the research of quantum entanglement.

And that is what that is what our Akam, our newer company, which is quantum upgrade, is all based off of. And again, we have tons of research over there that is separated from the quantum.

And it is a very fascinating. We also have like a it's like a 7 to 15 day, free trial with that. So you can just test out and see if you feel it or not. Most people, you want to up the intensity if you really if you really need to like, physically feel it to know that it's doing something on you, you can you can crank up it.

I don't recommend it, like, for too long, because you'll notice that you can get a little, like, buzzed in your, central nervous system or have problems sleeping.

We see that quite a bit. Or headaches, so just, But I only recommend that to people because I understand if people have to feel it, to believe it. And that's right.

That would be the best way to feel it. I just don't recommend doing it for long term. Like to put it up on a high intensity and then walk away. So answer me this.

We know about the, the, the products that you have over at, Leila. Q but what are the products that are over at Quantum Upgrade? As I'm looking at that, what is it?

So that is it is is technically so it's a subscription service and we, we call it a digital service, but technically it's analog. But I think that can be a little over people's head to, like, think that something's going through, but it's analog instead of digital.

But it is, it's solely based off of quantum entanglement. So we have we can basically identify the source, whether it's you, your home, your car, your pets, whatever you want to do.

And then we basically put it into this field, this quantum field, and, and basically. Where you are, you're not actually, you know, it's not like you in this case, you get a jacket or a necklace or a card.

You just basically basically dial up and say, hey, throw me in a quantum field. And then you entangle the person their, their car, their office, their, their home.

In a quantum field of energy. Is that what you're saying? Exactly. And again, you know, it gets and it's one of those wild things where you're like, how is that even possible?

But so these are things it is. And let me just really fast give out like a quick study that we did to show this. And you can you can actually use quantum entanglement with our blocks.

So Doctor Gladden, if you were having some issues today or whatever you don't have a block. You could send me a photo of you as long as it shows your eyes and I can put that in my block.

And it is the same as if you are in the block yourself like it is. So what we did is we took, we took basically these blocks and we had them, let's say, in Germany, and we had a double blind placebo tests, and we took the blocks.

And then we had people like in the UK, and we measured all their markers while they were in a room that was

basically like a Faraday cage, no EMF, nothing got all their biomarkers, and we brought a Wi-Fi router into them, tested it.

Obviously their numbers went different. And then what we did is we took like a picture of them. Now this is in Germany. They're in the UK, right. So in Germany we put, a photo of them in the block in Germany.

And then we waited like ten minutes and we retested them in the UK and their numbers were equivalent to the pre-exposure Wi-Fi. And so the same as if you had a block in front of you.

Yeah. That's that's crazy. That's crazy. And it's crazy cool at the same time. Right. Yeah. So yeah, I just. So I have a blog and sitting in my living room.

So if I take a photo of myself, printed out on here at the office and take it home and set it in there is am I going to be entangled with that block now, wherever I go?

Is that what you're saying? Well, you'll be protected by the like. You're covered with the frequencies that are in that block. So you are protected from like the harmful effects of emfs, all that type of stuff.

There it can calm you down. So we do that for quite a few friends that are in a stressful environment at the time, right? Just have a test and they need it.

If they're in the hospital, we always take their photos and put them in and the blocks, And that works. But I've got I've got to go to Japan on Sunday to give a talk.

There. Early next week, if I put my photo of my face in my block in my living room, it's going to be protecting me as I fly over to Japan. Is that what you're saying?

Absolutely. Absolutely. Anywhere in the world. Okay. All right. What about. The thing they found in there about. An astronaut going to Mars? Yes. Yeah.

I mean, that's the thing the the quantum field is, is all exists. Yeah. It's everywhere and it's all connected. It is. And this is like one thing they found in this study and the Nobel Prize was they said that quantum entanglement, is faster than the speed of light.

Yes. That's right. It's it's faster. Than. No, it's it's just everything of existence doesn't matter where we are in Mars or anything. Yeah. Yeah, there are other things faster than the speed of light.

Also like scalar scalar energies or faster. Yes. Speed of light. You know, it's. Yeah. Well, scalar is very similar in a way. It's one of those things where this isn't like scalar is like a subset of quantum.

It's like saying all the leaves are blots, but not all blobs or fleets, like, you know, it's like so scalar and quantum. A lot of people definitely mix them up, but it's similar to scalar.

But it's like there's some caveats to that. Okay. Just to touch on that because that's a common question for people. Yeah. Interesting. Well I'm going to take a photo, stick it on my block and then see how that works out.

That's all very cool. Yeah. Well this is fascinating stuff. So as you're listening to this, what we're talking about is actually real science. You're just hearing about real science at a much more foundational, fundamental level of physics than you're used to hearing about it.

Practical Use Cases and Closing Thoughts

Right? Because you're used to hearing about drugs and biology and, you know, chiropractic and, you know, surgeries and all that stuff. That's kind of my macroscopic scale.

And now you're working on your health. At the smallest levels possible is really the level of your atoms, if you will. And so and molecules and that's, that's a, that's really a super cool, super cool thing.

So we'll talk about. Something like we created it so people think we create I want make sure we know that we create it. We're just utilizing that's you know we're utilizing what's available.

So I just want people think it's something like we created quantum energy. We did not. It's been from the existence. We just learned how to utilize it and to pack it up.

That's right. It's part of the fabric of the universe, quite honestly. And this whole idea of quantum entanglement, you know, was first theorized back, and I think it was the 20s and 30s, you know, Einstein.

And then, the guy that actually wrote about it, forget his name, quite honestly. But science is back there, and Einstein couldn't believe it. There's a lot of debate about it.

And then this idea of entanglement came around. This spooky action at a distance, as Einstein called it. And then. Yeah. Being able to actually prove it. Right.

So it was it was a theoretical physics concept based on the mathematics that they'd worked out around some of Einstein's principles. And then, some of these other principles.

But now it's actually been proved that, that in, in the physical world, this entanglement is actually happening. So if you're listening to this and you're like, these guys are I don't know what they're smoking, but I think, you know, this a little crazy.

This is actually real stuff that's at a very foundational level. So you should give this a hard look. It's really, really interesting stuff. So yeah. And again the best thing is to feel it I think that's for anyone, to experience it.

And if you need it, you know, the quantum upgrade. And again, I totally appreciate the crazy or skepticism you're thinking we talked about with, with the with the quantum energy.

That's great. And then next level is quantum entanglement. And then that's even like it's a lot for someone to even put on their plate and even start to process.

But I always feel like if you can experience it, that like everything else shouldn't matter because like, which is still there, the great the science is there.

But it's like if you can experience and feel it, like then you know, it's we can see it. We can't see cellphone signals, but we can talk on a cell phone all day.

That's it. That's know stuff you can't see is real all the time. Right. So yeah, this is Mr.. Another extension of that. So if I take a picture just of my eyes and stick it in there, is that all that's required that need my face? Correct?

Yeah. Okay. The face is better, but it's your eyes are the identifier. Okay. It's the most crucial part is your eyes. Got it. You could do it. Also do this, like with your pet. You can do this with loved ones.

You do not want to put more than one person in there, because then that will create another level of quantum entanglement. So maybe that's good for a relationship, or maybe it's bad.

Yeah, yeah, yeah, they can be, you know, either good or bad. But you don't want to be putting friends in there and mixing people that don't know each other because that again, you can read more on like quantum entanglement and that's not it.

So like, you could have yourself in there, I wouldn't be putting you and then 15 other friends or anything like that. But you could put your pet under there.

Anyone else? Just, and logistical side, if anyone tries this, it has a block. We also recommend is to take it out at night. Because it can definitely help people or cause people not sleep.

Oh, okay. Interestingly. Yeah. That's interesting. Well, yeah. Putting 15 people in there, that's a new definition of a party apparently. So yeah. Yeah.

All right. Well great. Well, this has been a fascinating conversation. Todd. I really appreciate you taking the time. And if you're listening to this, go check out these websites for some fascinating, products there.

And, again, thanks so much. Absolutely. Thanks, doctor. Glenn. Yep.
