Introduction and symptom history

Hi, my name is Linda Tucker and I'm 51 years old. I've had the symptoms since 2004, about eight years. They started quite suddenly, almost overnight, with a burning of my tongue, throat, lips, nose, even down into my chest area.

It was originally diagnosed as acid reflux disease, so I never even knew there was anything called Burning Tongue Syndrome until most recently.

Misdiagnosis and years of ineffective treatment

I stayed on Prevacid for seven years or so and it never did any good, but I gave up hope and I kept taking it until I discovered the Burning Tongue syndrome kit.

I was just learning to live with the syndrome. And since taking it, my symptoms have improved dramatically.

Improvement after trying the Burning Tongue Syndrome kit

I go from most days where I used to be more like anywhere between a 6 and a 10 on a scale of 1 to 10. down into some days a zero, some day maybe a three or four, but certainly never above a five most days.

I found the results to be simply amazing. They definitely improved the quality of my life.

Quality-of-life benefits and recommendation

And I'm able to concentrate better and I can actually eat things like an orange or a sip orange juice or even a colonel then without just dramatically irritating the symptoms further.

So I would definitely recommend if you have these types of burning tongue syndromes to give this a try.
