Introduction to the Interview

Hey, it's Nathan Crane, director of the Health and Healing Club and host of the Conquering Cancers Summit. And today, I am honored and excited to welcome you to a very special interview.

Hi, I'm John Santoro. I work here at the center for New Medicine. I'm a technician for Doctor Connolly. One of the services that we provide here. Doctor Kennedy has acquired what's called the CEP.

How the CEP Pressure Pulse System Works

Okay. The QP is a, electro hydraulic system that produces a very intense pressure pulse. Okay, 25,000V goes through this cable. It reacts with a there's a chemical compound in here that gets triggered with the electricity, and it produces a very, very strong pressure pulse.

It's kind of like being, at a parade, and you feel the bass drums coming by and you feel it on your body. Well, this would be more directed in that regard.

It's based on, lithotripsy in the mid 80s. Gentleman doctor Andrew Haig, helped received the first, lithotripsy systems in, in England. And from that the work was the work is based on that lithotripsy is used everywhere, actually around the world to, break up kidney stones.

Works really good for that. It's real precise. And by design, this is not precise. It goes into the body and goes all around. So why do we use it on our cancer patients?

Specifically for cancer, it's been, discovered that cancer is really an electrical fault.

Cancer Polarity and Electroporation

So normal, healthy tissues have a positive and negative, polarity to it. Your liver is positive on the outside. Negative on the inside, your kidneys, everything all your systems are that way.

And they emit a clockwise rotational force, outward from the body. Everybody has it all day long. Everywhere. Cancer. What it does is it tries to hide from the body and the body's immune system.

It uses a fiber. It develops a fiber gene sheath over itself that helps hide it and also reverses its polarity. So it's negative on the outside, positive on the inside.

Unfortunately, your body has very little chance of getting to it and fighting it. So when it's exposed to the very intense pressure pulses of this system, the we use this for dramatic effect.

Little battery positive and negative when the cancerous area is assaulted, if you will, by the very intense pressure pulses it tries to hide and it reverses its polarity.

Once that's gone, it doesn't know how to flip back. It's stay there, stays there. It's stuck, and it's now unable to reproduce any bad, RNA. That fiber gene sheath that also protects it, it, gets holes punctured in it.

It's called electroporation. So the whole process, is really beneficial. Overall for the patient, there's no silver bullet, if you will, to, to help every patient, for every malady, every concern in that regard.

But we have found that this is really, really, beneficial treatment to the, the overall treatments that we have here at the center.

Treatment Goals and Immune Support

It when they leave our room here, they're in a really good fighting position for anything else they're going to do. Overseas. Indian in Spain. Oftentimes it's used as a standalone treatment.

There are other you know, issues and concerns that the doctors have with their patients, but oftentimes they use it as a standalone and they go about their business and they're doing very well.

We're we're a cog in the whole system. The overall betterment for the patient is, is drastically improved. The other benefits that we use it here at the center, for Spie, for, pressure pulse treatments is really good for musculoskeletal issues as well as, endocrine dysfunction.

So if you have high blood sugar, if you have pancreas issues, if you have adrenal fatigue, the, intense pressure pulses can treat those areas. And, and institute's, healing process.

How does it how does it institute the healing process? What is that pulse? That pressure pulse do?

Attitude and Patient Mindset

Well, the pressure pulses, what they do is they create a a microsecond, a millisecond of, of, traumatic effect, a compression to the tissues. Your body feels that as a trauma and sends all the good healing properties to that area.

So it's like basically creating horny cysts within the body, like a healthy stress. Right? Right. And so it's really good for, ligaments, muscles. It helps with bone, restructuring, healing, reinstitute sort of stalled healing process because of the, pulsed electromagnetic frequencies that are also emitted.

What happens to the cancer cells after they switch polarity? So now they reverse polarity, right. And they've got like some puncture holes in the sheath around it.

Right. Then what does the, you know, patient need to be, focused on at that point in terms of what is the body to do with those cancer?

Case Study and Wound Healing Results

So that point so your immune factors and the, the treatments that the doctors do, there's numerous treatments to help the patient, rid themselves of that, that burden, in and of itself, our goal is to really just flip the polarity.

Once that's done is up to the body's immune system and all the other modalities that they're going to do here to to rid the body of it. Keep in mind that once the body has been interrupted by the the cancer, if you will, you have more problems than just the cancer.

More often than not, it's going to be a host of other, issues that are going to need to be resolved. This is taking care of that all important aspect of repolarization to give yourself a really good chance at, at, prolonged success.

So at that point, you need to be really focused on all of the immune and the immune factors factors, right? Yeah, absolutely. Great. Anything else people need to know either about this machine specifically or even about, you know, some of the immune system things that you should be focusing on to help their body, rid itself of cancer.

I think the doctors, the doctors talk about it in, in detail is, a healthy attitude. We see that all the time is that, you know, understandably, the patient is going to be upset and sad and, you know, all the all those things that go along with that.

But, you know, I found that the patient with the good attitude, knowing what they're up against and are, you know,

in for the fight, they know they're up against it.

And no one's fault in particular, but they just have to be able to focus on, their attitude. I think attitude is so important. It's probably one of the most important things.

Yeah. Beautiful. All right. So we had a patient, who had a history of cancer and both breast. She had a double mastectomy. She had, he applied himself that a doctor somewhere had recommended to her, and it ended up just eating the skin away.

So she was open wound, shoulder to shoulder. Felt really bad for her. She came in. She was on oxygen, in a wheelchair. She was really bad. And we treated her for the cancer.

We were able to to help her with that. And then another aspect that this is really great for is for wound healing. So the, the pressure pulse waves, institute a, heal healing process.

Additional Uses for Musculoskeletal Conditions

And with this gal, within about a month, maybe, maybe five, five sessions, she had about a nickel sized wound. Open wound, left our upper right side of her chest.

It was incredible. Also, within that time frame, she was no longer on oxygen and no longer in a wheelchair. She's walking down a hallway saying, hi, John.

And I'm like, wow, it's great. It's great. But it works really good for, for wound repair. Also plantar fasciitis that, foot disorders. It works really good to help repair plantar fasciitis.

Problem is, in certain areas, it can be, very unpleasant, to the point where you might need lidocaine or silicon injection, pre treatment. But it works really good for, for healing that bone spurs as well.

There's a gentleman in Minnesota who uses the system. He's a physical therapist, and he, helps musculoskeletal injuries. Strictly. Does a great job with it.

Great. Well, thank you so much, John, I appreciate it. Thank you so much. And I want to thank everyone for tuning in to the Conquering Cancer Summit. Please share this with friends and family.

Together, we truly can make a difference for the future of humanity in ending the cancer pandemic. Thank you and I wish you ultimate health and happiness.

Be well.
