COVID frustration and Dr. McCullough seminar

In my career, I'm pretty used to getting really good results with patients. And when you give people the right diet and the supplements, then good result occur.

But since COVID, that's not been true for a number of people. It's been quite frustrating. In August of 2025, attended a seminar with this guy. That's Dr.

Peter McCullough. He is one of the most cited researchers in all of PubMed. He's been very outspoken about the COVID vaccine and he's had Senate testimonies and hearings and I saw him on stage and here's what I learned and it may apply to you.

He talked about this test is called the Covid-19 antibody test. It's available at LabCorp. This is Labcorp on demand, meaning you can bypass the whole medical profession, your MD, and go straight to LabCorp and get this lab run on you.

And the reason why they're doing this is because, Dr. McCullough says, the MDs are culpable, meaning blameworthy, for creating this scenario where people have elevated antibodies to the spike protein every day for years, five to 15 years.

And therefore you just get this test run. There's the price right there is $69. You buy it right on this website page right here. It says add to cart.

Then you go to LabCorp locations web page and you find out where's your nearest Lab Corp.

LabCorp antibody test and why to run it

And then you got there to get your blood drawn. And it says right here, learn if you've been exposed to COVID-19 or if we've built antibodies from vaccine or infection.

Now, Dr. McCullough said it doesn't matter if he had the infection naturally. The only thing that really matters is if she had a shot. I'll give you the solution at the very end.

But when he said this, I thought about several of my patients and I was like, oh, maybe they got the shot and that's why they're not responding to the therapies I'm giving them.

So I ran it on myself and you can see my score right here is 101. He wanted to be below 1000. So here's a person with a skin condition and normally I can fix it pretty easily, but I was having trouble and I thought, well, maybe this person has a high COVID antibody test and sure enough, it's 7996. Once you're above 5000, that's trouble.

Over 1000 is trouble, definitely over 5000. That's trouble. And there's a therapy I'll show you at the very end. But this is the reason why this person wasn't getting better with her skin condition.

Here's this guy's test is 17,272. He had stomach issues and they got way worse during COVID. Well, it turns out it was after he got three shots as mandated by his employer.

Throughout my whole career, even 20 years ago, I've been really good at fixing digestive issues. I couldn't understand why he wasn' getting any better.

This answers that. Here is this person's score, 14,832. And he's retired military and he has had hundreds of shots, he said. But this is one shot we have to address specifically because there's never been anything like it.

Your body's making the spike protein because it tells your DNA to do that.

Patient examples with high antibody scores

It's going to work like this for five to 15 years. Then your immune system goes haywire trying to tackle that spike protein. Now this poor guy is so high it's greater than 25,000 and he's been seeing me for less than six months but usually within six month I'm having people feel 10, 20, 30 percent better quite frequently but he wasn't any better no matter what we did.

And he was seeing a holistic medical doctor putting him on anti-parasitic drugs and doing all kinds of things that holistic MDs do. And he's had terrible endurance and fatigue, and he is not happy with how his body is performing.

Usually, again, this is what I fix all the time. So when I learned about this, I said, oh, you got to run this test and his score is greater than 25,000. This is the solution to this problem.

It's called the Ultimate Spike Detox right here, developed by Dr. Peter McAuliffe. There's the price. You can buy it directly from this website. I'll put the links below for LabCorp and this web site.

We take two in the morning, empty stomach. it's got a variety of ingredients, but especially natokinase. Why add nato kinase? Because the spike protein is a protein and it dissolves with proteolytic enzymes and natokinase is an proteolitic enzyme, it breaks up protein.

So get rid of this big protein by taking a proteolithic enzyme. Here are the ingredients selenium, turmeric, bromelain, nato kinase, black seed extract, dandelion, and black pepper.

So the standard dosage is four capsules. Dr. McAuliffe was talking about two capsuls a day on an empty stomach. But if you have a really high spec protein antibody count like the ones I showed you, four a days would be fine.

Two in the morning, two before bed, empty When Dr. McCullough was talking about the subject, he mentioned that MDs don't want to run this test. And he specifically said that there are cancer clinics and university hospitals that won't run it because they are guilty.

Spike detox supplement and dosing

He mentioned three cancer clinic, one being MD Anderson and he also mentioned 3 university hospital, 1 being University of Michigan. So I'm saying that because I am near U of M and I got local patients and if they go to their UofM doctor and say, hey, let's run the test, they're not going to do it.

You have to order it yourself. So hope this is helpful and actually life changing for a lot of people. And I'm just going to recommend Dr. Peter McAuliffe's spike protein detox product.

I am not going try to replicate that or combine a bunch of products together. Just do what he made because It came from his brain and he's had it tested.

So it actually works. And if your number is quite high, you're going to be on this product for one to two years. Make sure you read your lab report correctly.

A negative result is less than 0.8, which is a crazy low score. I think I had COVID three times. Each time was I would call mild and my score is 101. If you had Covid, then you might show up with antibodies.

So if your score is less than 0.8, that means you've never had the shot. You never have COVID and you never head shedding on you. And that would be really, really rare.

So this is something you can do on your own. I encourage you to do it if you ever got the shots and can prevent future problems just by taking a simple supplement.

OK, see you the next video. This video is brought to you by MyOffice. We use new and old clinical discoveries solving complex chronic illnesses using only diet and supplements.

Lab interpretation, closing advice, and office promo

we have this fantastic building, we do multiple practitioners, local and distance consultations, and we help you improve your health as opposed to just squashing symptoms.

And we also have a variety of opportunities for you to get involved. We have e-books and courses that are paid for. I have my large seven-step Blueprint to Optima Health online course, which walks you through the seven step Blueprints to Optimum Health, and you have access to all the supplements at patient pricing.

My book is available on Kindle. If you want to buy supplements from my office, we have this store which is for patients only, And we've this door which for everybody else.

But if you just want jump into direct care immediately, just contact the office directly.
