Introducing the MVX+ Blood Test

What's missing in healthcare is a simple and cheap blood test that actually verifies that your diet, supplements, and lifestyle choices are actually making you healthier.

Until now. This new test measures cell function. If your cells are functioning perfectly, then name the disease that you have. Answer? None. There are no diseases when your cells are perfectly functioning.

What prohibits the cells from functioning perfectly? There five major concerns. Inflammation, infection, toxicity, malnutrition, and mitochondrial dysfunction.

This blood test measures all five. It points you in the right direction for your biggest concern of those five, as to which of the five is your big concern.

And the test is so cheap you can redo it every six to eight weeks to monitor your progress. And when your biggest concern is much better, the test helps you pivot to the next biggest concerns.

It gives you a score 1 to 100 for your overall health. You want that score to be low. The test is nationwide at LabCorp and anybody can order it straight from my website.

My name is Dr. Darren Schmidt. I'm a chiropractor focusing on nutrition for 30 years.

How the Test Measures Cell Health

This test I'm referring to is called MVX+. It was released January of 2025. This tests verifies my whole career. If you've seen any of my videos, I've made a thousand videos for YouTube.

I am on Facebook, TikTok, etc. You've heard me talk about cleaning the cells, detoxing, getting rid of parasites, and nourishing the cell, nourish the mitochondria.

this test measures and verifying all of that. It is the single most important test. it should be part of our annual physical. The test is crazy cheap.

Here's what the test looks like. So check out this example below me. In June of 2025, this guy's score is 49. The test told us that we needed to focus on his immune system.

I put him on supplements for that, and it kind of stirred the pot. So his score got a little bit worse. It went up to 50. But by the end of September, it got all the way down to 43. We want the score to go down.

Patient Examples and Score Improvements

And he's feeling much better. He's very happy. This lab test not only shows us what we did is working, but it told what to do. Now it's telling us to what do next.

These are my scores. Check this out. It's very interesting. So this is my first score in January of 2025. I had a gas leak at my house. Had terrible lung pain and heart pain.

My score was very high. Found the gas leaked. Stopped it. One month later, my score dropped to 31. Felt so much better. Third test, I got a sinus infection.

Got rid of that. Fourth test got better, fifth test better… Then I started detoxing. Took supplements for the leak. I

started feeling worse, but I knew it was a good thing because I needed to get cleaned out and my scores got worse and then it's kind of plateaued.

But then I added mixed nuts and a protein bar into my diet and I felt this much worse. So I stopped detoxing, stopped the mixed-nuts, stop the protein-bar and starting here to feel better.

In the mix-nuts and protein bars, there were some artificial sweeteners that were really messing up my muscles. This MVX Plus blood test has helped me identify the sinus infection here.

It verified that protein bar were actually harmful for my body. And then here it shows me that stopping those foods was a good choice. Check out this 66 year old female.

Her first score was 69, which is terribly high. She didn't feel good at all. I put her on supplements and changed her diet and she was starting to feel a lot better.

But by July of 2025, when she had her second MVX Plus test done, It was worse because she had an upper respiratory infection.

How to Order and Take the Test

She had to go on antibiotics. That was just a little speed bump, not a big deal. And then by October, her score went all the way down to 58. she's down 16 pounds.

Her gut is completely back to normal. No constipation, no diarrhea. her blood pressure is much better. This lab test verifies that the work we're doing is helping and it tells us what to address next.

So now you're interested in taking MVX+. Here's the first step. Step one, find the local LabCorp nearest to you. If you don't have a Labcorp or you can't drive to one that's fine.

You can still become a patient in my office and still get the benefits of the program that we use to get people better. Step two, go to the front page of my website, upper right corner, it says MVX test.

Click on that, order the test, step three, make an appointment at LabCorp to gets your blood drawn. Go fasted in the morning, you have to be fast at 10 to 12 hours.

We get the results by email in five to seven days, we will forward those results to you. Next step is to make it a point with us to find out if we can help you, We'll look at your history, we'll talk to you, We will look into your NVX Plus blood tests and any other labs that you want us to look.

That first visit is a half hour long and we gather information from you. Then there's a second visit, it's called the report of findings visit. At that visit we tell you what we found and give you a plan.

If you accept that plan, then we can start. Contact us by phone or use a link on our website to go to the inquiry page. Fill that out, and then reach out to us.

This is brand new opportunity, this blood test opens the door for true healing. There's never been anything like it before. So get the test and let's get started.

And even if you can't get a test, we can still help you. To get to test. Let's go. There is no better time than now.
