Introduction to Molly Feeney and Bio Scan

Hey, it's Nathan Crane, director of the Health and Healing Club and host of the Conquering Cancers Summit. And today, I am honored and excited to welcome you to a very special interview.

I am joined by Molly Feeney, the doctor of natural medicine. Yes. And she has a very unique specialty here that she's going to share with us. I'm actually going to act as a patient here in a moment and share with you this incredible technology that she'll explain to us, which, maybe I'll just do that now.

Tell us a little bit about what you do here. Okay. How do you help people with cancer? Okay. And what is this bio scan that I'm about to go? Okay. Well, this is it's like bio meridian testing.

You know, the meridians in your body. It's kind of like chest energy. And it's the fastest transmission of information that we can get from our body. And they've actually done studies where they injected radioactive isotopes into somebody's meridians.

And they saw the the speed of light. I mean, it was so quick. It's faster actually in the speed of light. And they also injected those into veins. And it went through but not as quick.

So we know that this is the fastest transmission of information as far as getting information from our body if something's going on, like imbalances. So what you're saying is that our ancient ancestors, specifically in the East and those like China, understood this ancient medicine, like, traditional Chinese medicine, for example.

They knew what they were doing. They knew what they were like. Yes, they knew what they were doing. They really did. And I've actually studied in China.

I've been there a few times and studied with a doctor that this is Doctor Wong. He comes from a line of 1200 years of physicians, and he specifically, sells us, Chinese herbs that his family's been using for 1200 years.

And that's when I test the, cancer patients on or everybody. Really? Because I'd look for an overgrowth of abnormal cells as opposed to circulating tumor cells.

How Bio Meridian Testing Works

I look for an overgrowth of bad normal cells, because if I find something like that in a specific organ or area of the body, we know that something's cooking, something's going on, or it could be something.

Yes. Absolutely. Sure. Absolutely. So, we just never know what it is until we do the testing. And Doctor Akinyele gets all the pieces of the puzzle. And this is a very important piece.

How accurate is this testing? I would say 90, 95%. She says it's 95. It's pretty accurate because there's a lot of things that I can find that will not show on blood tests.

Yeah. You know, I look for parasites. I look for heavy metals, fungus, viruses, bacterias, you know, pollution. Just I have, like I was telling you before, I have 40,000 items that are imprinted into my database.

Plus, I can test you on anything that's on this plate. Okay. So anything that's within the circuit of this testing, this, this machine under this, it's part of the whole, you know, circuit, you know, so that's how I'm able to get information and I mean, like, if you can see over here, I have a lot of herbs.

Yeah. So, you know, I use herbs. I use, you know, Chinese medicine. We use supplementation. I have parasite

medication, fungus bitten indication mold.

You know, whatever your body needs. And there's no way that I know until I test you. And then through a process of elimination, your body tells me what it needs to balance that specific organ, tissue or system.

And we know so many people today. Millions and millions, probably billions now are plagued with things like parasites and chronic infections and pollution.

Pollution? Yeah. Heavy metals, all these things that are leading and actually creating chronic diseases like cancer. Well, yes. And I have every cancer patient I've ever tested has some type of a fungus or candida.

Because if you think about it, it's like a sponge that holds all these toxins in your body and you can't heal until you get rid of it. Yeah. It doesn't mean if you have, candida or a fungus that you're going to get cancer.

But if you think about it, it is a breeding ground. And it's like it's it's, instigating chronic inflammation. We know chronic inflammation causes cancer.

Yes, yes, yes. And, it's an interesting I just want to show you this really quick. And this really helps the patient understand. Oh, of course I don't have it. Let me.

But what about this right here? Sure. So what it is is this is like, you know, cancer is a 12 year disease, and tumor formation is in your. Right. So there's a lot that goes on in our body before a tumor is formed.

It takes 1 billion cancer cells. So this is the way that I help a patient understand what's going on in their body. This is kind of like the invisible.

And this is oftentimes things that conventional medicine or blood tests or or, you know, Cat scans, all that can't, can't see the eight years leading up to your actual cancer diagnosis.

Right. In some people, it's even longer. Well, yeah, exactly. Because this is right here at this level where conventional medicine, I mean, conventional testing is done and performed.

But think of all this time that something has been going on in your body and you are not even aware of it. And this is where I pick it up. I can pick it up here too, but I can pick it up from the very beginning because everything starts in an energetic or emotional level, and it goes on to the meridians and then to the, you know, the nervous system and then the cells.

So that is a lot of time lapse before and a lot of chronic diseases. There are no symptoms. Right. And the thing is in cancer well a lot of cancer you absolutely have many cancer.

The tumor is only a symptom of cancer. The disease.

Cancer, Inflammation, and Hidden Imbalances

So if you get that tumor removed, that's why it comes back or manifests another way to suppress the underlying. Yes. And there was a reason. It was a reason it came whether it was emotional, whether it was and it wasn't the tumor.

No, no. Right. But it took a long time. Yeah. You know, so one thing I, I just want you to make clear if possible, if this is right, is, you know, we know that everything is energy, right?

Everything. Everything in the body. That's why I specify to people that everything starts in an energetic level, and then it goes from there. Anyway. Excuse me. Yeah, yeah. So cancer is energy.

Cancer cells are energy. Cancer stem cells are energy. Your meridians system in your body is a system of energy,

right. And energy is. Absolutely. And so you're tuning in.

What we're doing here is tuning in to that energy system to tell us what's going on with the body. Yes, absolutely. That's exactly what we're doing. Well that's awesome. Makes sense to me. I hope it makes sense.

Everybody tuning in. But let's let's go ahead and do it. Let's see what this okay. What this tells us okay. So I'm going to have you you don't have your phone in your pocket I actually took it out because okay I know that because we don't want any interference I had a feeling.

Yeah. Or medication or anything. Okay, okay. So you hold this in your hand and think these keys nowadays. Oh yeah. Yeah, yeah. It's electrical. Yeah. Take that out and just chips in a just you.

Right. Okay. So hold this in your left hand. So this is like I was explaining the ground or the negative. This is the positive. I'm going to introduce this to your body.

And this is just water. And this transmit the information. So I get this wet. And so as you can see here I'm just going to test different parts. No just kidding I didn't feel anything.

Oh I got that look dirty okay. So just relax right here. And I'm testing your hands represent different systems. Those machines. Now you know you want to be in the green as much as possible.

This tells us that you're balanced. If you're below the green, that means that it's chronic or weakened. Okay. Your hands represent systems like endocrine system, lymphatic, nervous system, digestive system.

Your feet represent the organs. And so we're just going to do this, you know, part of this hand. But now look at that. That's in the green. That's in the green.

Now the first one wasn't this one was this is okay. I can usually tell by testing somebody how what kind of lifestyle they have. You know, pretty much green.

Green I like that. And you can see right here that was your. Oh so this is representative of your teeth. Oh you're going down the. Yeah. So right the meridian points. Yes.

Oh and look at this is pretty good. I mean, this is really good to know. So now this is line right here. This is your lung. So we'll just say good night green.

What was the first one that was kind of weak. So this one it was lymphatic. But let's just go back to the very beginning throughout your time. So interesting.

So a lot of okay here we go. So a lot of times what happens is somebody just a little bit a little bit a little bit below the grade. I had a ton of throat and tons of problems as a kid growing up.

It was CNS of strep throat. We'll see. And that's the antibiotics. Yeah. We'll see. That's what's interesting is because a lot of people like I find like roundup in people and they're like, I don't know where I get it.

And then I start talking about it. They grew up on a farm. Right. And there was all that spring. Yeah.

Live Scan Results and What They Reveal

And so this is what's cool is this will pull up things that it's just shocking that people, you know, this is large intestine. Colon. That's pretty weak.

That's that's pretty weak. Yeah. Which, you know, makes sense. I've been doing some digestive stuff and healing. This is nervous system. Nervous system.

Okay, interesting. It's a little weak. Yeah. Circulation in the grain circulation. That's great. Now, this, it says allergies, but this is actually your immune system.

Okay. Let's show straight up to the very. That's like the perfect, perfect immune system. You have a great immune. This is immune system also okay. So that's great.

Your immune system is really good. So metabolism entire body okay. That's really low. That's really what is that about. Well your metabolism, there's some reason that your metabolism is really low right now I don't know if it would be normally is it.

I've just had lunch with. Have anything to do with it. Yeah. Could be. Yeah. Okay. So when somebody tests with me, I don't let them eat for a few hours.

A few hours before your body's working on that. It's working on that. Just because this test, the cool thing about it is it's going to pick up the last thing that happened in your body.

Okay? So it goes from the inside out, from the, feet to the top and from the last thing that you did or the last illness you had, you know, and it goes backwards like that.

So that makes sense. And normally I would let people like, you know, you have to drink blood water. There's an actual protocol that I have them follow up because I get a big difference in results.

Makes sense. So this is your and your current system right. And so this is your thyroid. And this is where a lot of people, are a little bit low. Oh so really low.

And then this is your pituitary gland. That's pretty low too. And this is. Yeah. So the the pituitary gland is the master gland. So this is something you'd want to look at.

Okay. Okay. And then your heart, muscle looks pretty, right. Yeah. Close to green. Close to green. And then this is small intestine, which looks really green.

That's good. And then the last one on this hand is brain and gut. It's a little low. Yeah. So that's a good example of what it is. But then I and then so what we do.

So let's just pretend like we did the whole thing right okay. So you do the whole body or you would do the see you look at the organs you look at. Right. Okay.

So now let's just say if you don't mind putting this on film, let's just see. It's fun. What? But life's an open book for you. All right? Now. Okay. So we're going to see what balances you.

Okay. Okay. So that's a good indication. It went right up there. So there's this product that I'm going to explain to you. Let's see if it went in okay I'm going to see.

So that went to green when you checked in. Which one were you checking. You have Candida. Which is very common, especially if you've had antibiotics. There's a lot of things that cause Candida and you have fermentation.

Let's see. I'm just going to go through here. That was a little bit weak. Let me just check it. And I understand I'm not diagnosing you. I'm just telling you what's coming up.

Yeah yeah. So you have fermentation that's caused by the candida okay. And then let's just look at. So this is just an example I just want to look so this and then you're looking in which point is this.

And so this is an organ point that really the reason I use this a lot is just because it kind of goes everywhere in your body. Okay. That's a really good point.

So what you're going to see now is some red squares. These squares represent different products or lines of products. Remember I told you I have about 40,000 items that are imprinted into this are recorded in the database plants everything, supplements everything.

And so through a process of elimination, your body's going to tell me what it needs in here. If it goes up to the green when I test you, we know that there's something in here your body wants.

If it doesn't go under the green, we know that we're going to get out of that. And go into a different category okay. Set of categories. So let's saying.

So there's something. So now it's going to start eliminating what it knows that your body doesn't need. Okay. And then it's cycling through 40,000 different.

Well not probably this is probably see how many scores. That's either how many there are or how many categories there are. Gotcha. But I can keep going through a lot of different ones.

But there is something your body wants and it's kicking out what it doesn't. Oh, so you keep testing in until it gets to down and hones in on the one.

Candida, Parasites, and Detox Protocols

And there's two squares left. And now we're going to see what this last one is. It's in the green. So you need lymphatic drainage okay. Makes sense because I said yeah because remember.

Yeah I remember that first one that we did that was lymphatic. And so it's saying you need a lymphatic drainage. And if you have toxins in your body we have to find a way to get them out.

Get them out. Yeah. So like let's say that you have this bathtub full of water, but it's all toxins and all the toxins are going into the tub. You can stop, like, stop the the, you know, turn off this.

The faucet, but you still have all that. So we need a way to drain it out of your body. So we know you have candida. So we've got to find a way. So lymphatic came up and that was the first thing that, you know came that you know we tested for.

So let's just like do a quick thing so I can show you now when Candida when Candida is dying off and you're removing out of your system. Is that it goes through your intestinal tract, right.

Does it also drain out of your lymphatic system? Well, everything. Yeah, everything drains out of your lymphatic system. I have normal cells and right toxins and.

Right exactly. Now this you see the boxes are bigger. This is a different category. Okay. This is now let me ask you, do you ever eat sushi? No, I used to you, but I went to, a plant based diet a long time ago.

11 years ago probably. Well, parasites are coming up, so I know you have parasites, which is very common. And parasites. I got giardia in a, in a lake in Montana.

Okay. I've been dealing with that for a while. Okay. Yeah, yeah. That's interesting. So it's. So maybe it's maybe it's identifying the. Yeah. She already or does it get specific on what kind of person it's mine. Not.

Tell me exactly what I mean. It will if I have longer to test you, but right now, I'm just trying to do kind of a baseline to see what's going on. But you definitely have parasites and parasites and worms and all that.

They're very, very evolved. They're actually the top of the food chain. They can actually morph into other parasites if they can, sense that you're trying to, like, expel them from the body.

Plus, they eat candy, too. So it's like you have this ecosystem going on outside of your body. Wow. And so it's like, this is what I do, and this is what I try to do to help people.

Because if we can start getting this out of your body, then your body is healthier and it can heal. Yeah. You know so so some so okay, so you found so we found out.

So now what do we do. What do I do to get rid of okay. So what to do okay. So what I do is I do things in phases because our body can only handle so much.

Yeah. You're finished with this. And so I would write up a protocol for. Yeah, I would most people I would have them do a cleanse. I have, we have a well we have a lot of cleanses, but I have a favorite just because I know how effective it is, because I do this 3D body scan, too.

And I've been able to scan people before the cleanse and after the cleanse. And it cleans their heart, their arteries, their all their organs. It's really good.

It's the 21 day, standard process cleanse. I love that cleanse. Do you go on a specific diet at the same time? Well just liquid. Well, it. Well, no, it's not just liquid.

It's actually I have this form that I have people fill out that I would have you fill out. Okay. And I have them. Hi. Like, I have a list of things that I don't want people to eat.

Yeah. And it's, you know, even people will tell me they go, well I eat really, really healthy. And I'm saying, okay, well, I just want you to highlight anything on this that you eat.

And they highlight almost everything and they go, oh, because it's it's foods that you think that are healthy. Like. But when I'm trying to give me a couple examples.

Bananas okay. Peanuts okay. Cheese and under cheese. Bananas and peanuts. Yeah. So peanuts are just a fungus. So that's feeding your candida. Bananas have five times the sugar of any other fruit.

Vegetable. Yeah. Okay. Let me think of some more things. Squash. Sweet potatoes. Potatoes. Sometimes. Fruit. Yeah. Berries are okay, though. So you want low, low glycemic load fruits or more high nutrient things like berries, but not.

Yeah, it has more flavor. Exactly. And more fiber. Exactly. So we're trying to use it, but a lot of people drink kombucha and think that that's really healthy.

Yeah. And it's not. It's full of sugar and yeast. And it's not nutritional yeast. That's okay because it's dehydrated. It's not alive. Yeah. That's okay.

But just like regular yeast is just going to feed the fungus. And so the yeast that's in kombucha is actually going to contribute. Yes. You have real big time. Interesting.

You don't drink I do, but I drink I used to I used to have a laboratory in my kitchen that made you in Carlsbad, California. Here's a funny thing, though.

It helped between apple cider vinegar and homemade kombucha. Okay. Yeah. It actually helped clear up. Heartburn. Oh, good. Yeah. Good point. Which is good.

But that was just because I, you know, I was coming off of an animal diet like a lot of meat and potatoes and things like that. Right, right. But not knowing that is contributing to.

Yeah. To the yeast, to the Candida. Yeah. So I got to start kombucha. You got to stop it. Okay. You got to stop. I'll do it. Yeah. So those are just some examples, you know rice obviously any kind of grain, including oatmeal.

Yeah. Bread. All grains. Oh. Green one. No, you can have quinoa, but just, you know, more limited amounts. And I give my patients a list of foods, a huge list of foods that they're allowed to eat.

Okay, because they get pretty scared when they see that they're like, well, what am I going to eat? Yeah. How effective is this in terms of going on a cleanse, like, oh, for keto parasites, dreamily effective.

And if I knew we were going to be doing in here, I would have shown you a before and after test. But it's extremely effective.

Cleanse, Diet Changes, and Closing Remarks

Yeah. By the way, we just stormed into our office and says, hey, can you test this? Right? That's exactly right. But it's it's. Thank you for being a well, I know, I know, I'm good.

No, it's really, really effective if people follow in the think this is it example like if, if they give would take what I give them to get rid of the Candida and they follow the, the diet, they'll get rid of it.

It's as important following the food plan is as important. Like, let's say you're diabetic and you're getting insulin shots, but you're still eating cake and cookies and stuff.

It's not going to do you any good. And it's the same thing. People can go on this very strict protocol and they they take everything exactly the way they are, but they don't really follow the food.

It's not going to do any good. So I tell them, if you're not going to eliminate these things from your diet, don't even like, don't even waste your money or time, just don't even do it.

And I mean, there is a huge, huge difference. People can sleep better, they can think better, they lose weight, and I'm not even having them do it for those reasons.

I'm just trying to get that toxin out of their body so they can start healing. Yeah, those are just like great side effects. They're like, oh my gosh.

Yeah. So okay, so I want to do this cleanse okay. Can I do it. Yes you can. Yeah. So I want to say if you want to, work with Molly or learn more about this, go to Cancer Center for healing.com.

Thank you for, you know, being a great, oh, you're great host of this process and the good work you do. And you nailed it. I mean, I've been dealing with some parasite issues for and I've been doing all kinds of cleanses and things for years.

Since I got anxiety in that lake swimming in lake in Montana. So many people, especially with cancer, as you said, are dealing with parasites and fungus and back and so forth.

So we've got to get these things. Yeah, absolutely. And we can find him and help you and I make homeopathy. So I can make homeopathic, whether it's homeopathy, Chinese medicine or just supplements.

You know, your diet, there's just so many things that are little pieces of the puzzle that we put together and help people. Awesome. Yeah. Thank you so much. You're welcome.

And I want to thank everyone for tuning in to the Conquering Cancer Summit. Please share this with friends and family. Together, we truly can make a difference for the future of humanity in ending the cancer pandemic.

Thank you and I wish you ultimate health and happiness. Be well.
