The Real Problem With Chronic Lyme Disease (And Why Antibiotics Often Fail) Transcript

(Transcripts are generated by AI and may contain errors)

Introduction to Lyme disease

Here's something most people don't know. Here's something most people don't know. Chronic Lyme disease can be more Chronic Lyme disease can be more debilitating than many cancers. I've debilitating than many cancers. I've seen patients who were bedridden, unable seen patients who were bedridden, unable to work, unable to think clearly, to work, unable to think clearly, trapped in a fog they couldn't describe.

trapped in a fog they couldn't describe. Some had neurological symptoms, some had Some had neurological symptoms, some had psychiatric symptoms. Some were in psychiatric symptoms. Some were in Hi friends, Dr. Fred Bloom here. If Hi friends, Dr. Fred Bloom here. If you're new to the channel, welcome. I you're new to the channel, welcome. I help patients overcome complex chronic help patients overcome complex chronic illnesses, Lyme disease, mold toxicity, illnesses, Lyme disease, mold toxicity, chronic infections, chronic pain, chronic infections, chronic pain, cancer, and hormone imbalances using a cancer, and hormone imbalances using a blend of integrative and regenerative blend of integrative and regenerative medicine. Today, we're talking about medicine. Today, we're talking about Lyme disease and co- infections, and why Lyme disease and co- infections, and why so many people suffer for years without so many people suffer for years without answers. If you've been dismissed, told answers. If you've been dismissed, told your labs look normal, or bound from your labs look normal, or bound from doctor to doctor, this video is for you.

doctor to doctor, this video is for you.

The complexity of infections

Make sure you're subscribed and sign up Make sure you're subscribed and sign up for my newsletter so you don't miss for my newsletter so you don't miss upcoming videos. Here's something most upcoming videos. Here's something most people don't know. Chronic Lyme disease people don't know. Chronic Lyme disease can be more debilitating than many can be more debilitating than many cancers. I've seen patients who were cancers. I've seen patients who were bedridden, unable to work, unable to bedridden, unable to work, unable to think clearly, trapped in a fog they think clearly, trapped in a fog they couldn't describe. Some had neurological couldn't describe. Some had neurological symptoms, some had psychiatric symptoms.

symptoms, some had psychiatric symptoms. Some were in constant pain. Many told Some were in constant pain. Many told me, "I lost the person I used to be." me, "I lost the person I used to be." And nearly all of them had been told, And nearly all of them had been told, "Your tests are negative." Or, "Maybe "Your tests are negative." Or, "Maybe it's all stress." Let's talk about it's all stress." Let's talk about what's really going on. Lyme disease is what's really going on. Lyme disease is not just lime. It's almost always not just lime. It's almost always tangled up with mold toxicity, candida, tangled up with mold toxicity, candida, bartonella, besia, anoplasma, epstein bartonella, besia, anoplasma, epstein bar virus, and other viral bar virus, and other viral reactivations, parasites, immune reactivations, parasites, immune dysregulation. These layers create a dysregulation. These layers create a perfect storm. If you treat just lime, perfect storm. If you treat just lime, the patient stays sick. If you treat the patient stays sick. If you treat just candida, the patient stays sick. If just candida, the patient stays sick. If you ignore mold, the patient stays sick.

you ignore mold, the patient stays sick. When patients come to me with When patients come to me with long-standing fatigue, neuropathy, long-standing fatigue, neuropathy, anxiety, depersonalization, brain fog, anxiety, depersonalization, brain fog, autoimmune issues, dizziness, or autoimmune issues, dizziness, or migrating pain. It's almost never just migrating pain. It's almost never just one thing. This is why I used a layered one thing.

Diagnostic challenges

This is why I used a layered approach, not a kill the bugs approach. approach, not a kill the bugs approach. Most lime patients go through this Most lime patients go through this experience. A standard Western blood or experience. A standard Western blood or Elysa test is done. The result is Elysa test is done. The result is negative. They're told you don't have negative. They're told you don't have lime. But here's the problem. Standard lime. But here's the problem. Standard lime tests miss a huge percentage of lime tests miss a huge percentage of cases. Why? The criteria are outdated.

cases. Why? The criteria are outdated. The wrong antigens are tested. Chronic The wrong antigens are tested. Chronic lime often lives in biofilms or stealth lime often lives in biofilms or stealth forms. The immune system may be too forms. The immune system may be too suppressed to make detectable suppressed to make detectable antibodies. Some patients never saw a antibodies. Some patients never saw a tick. Most never had a bullseye rash. So tick. Most never had a bullseye rash. So I use vibrant wellness tickborne panel, I use vibrant wellness tickborne panel, MDL, medical diagnostic laboratories.

MDL, medical diagnostic laboratories. Other specialty laboratory testing Other specialty laboratory testing including fish testing, autonomic including fish testing, autonomic response testing, ART, to detect hidden response testing, ART, to detect hidden infections, advanced viral mold and infections, advanced viral mold and toxin panels when necessary, RGCC toxin panels when necessary, RGCC testing when the cure strain is testing when the cure strain is considered. This is how we find what considered.

Symptoms and mimicry

This is how we find what everyone else has missed. Lime and its everyone else has missed. Lime and its co-infections can mimic multiple co- infections can mimic multiple sclerosis, ALS- like syndromes, chronic sclerosis, ALS- like syndromes, chronic fatigue syndrome, fibromyalgia, fatigue syndrome, fibromyalgia, autoimmune disease, psychiatric autoimmune disease, psychiatric disorders, hormonal disorders, disorders, hormonal disorders, neuropathy, dementia like states. Many neuropathy, dementia like states. Many patients describe feeling detached from patients describe feeling detached from reality, severe anxiety or panic, OCD- reality, severe anxiety or panic, OCD- like thoughts, rage episodes, crushing like thoughts, rage episodes, crushing fatigue, migratory pain, brain pressure, fatigue, migratory pain, brain pressure, temperature swings, POTS-like symptoms, temperature swings, POTS-like symptoms, insomnia, trouble thinking, or trouble insomnia, trouble thinking, or trouble focusing. Bartonella can be especially focusing. Bartonella can be especially brutal with neurological symptoms that brutal with neurological symptoms that can feel overwhelming. You are not can feel overwhelming. You are not imagining it. Your symptoms make sense imagining it. Your symptoms make sense once the real cause is identified. This once the real cause is identified.

The failure of standard care

This is one of the biggest misunderstandings is one of the biggest misunderstandings in medicine. Antibiotics can help early in medicine. Antibiotics can help early lime, but chronic lime, that's a lime, but chronic lime, that's a different animal. Lime bacteria can hide different animal. Lime bacteria can hide inside cells, hide inside nerves, shift inside cells, hide inside nerves, shift into cyst forms, create bofilms, go into cyst forms, create bofilms, go dormant, reactivate, evade immune dormant, reactivate, evade immune detection, worsen with the wrong detection, worsen with the wrong antibiotic sequence, trigger antibiotic sequence, trigger neurological flares. Long-term neurological flares. Long-term antibiotics often disrupt the gut, antibiotics often disrupt the gut, trigger candida, spin lime into deeper trigger candida, spin lime into deeper hiding, create persisttor forms, make hiding, create persisttor forms, make symptoms worse, suppress the immune symptoms worse, suppress the immune system. This is why so many patients system. This is why so many patients relapse or never improve at all.

relapse or never improve at all. Thankfully, we have better tools now. I Thankfully, we have better tools now. I follow a clear sequence designed to follow a clear sequence designed to reduce suffering, calm the immune reduce suffering, calm the immune system, and restore function. This system, and restore function.

The terrain-first approach

This includes biochemical treatments, includes biochemical treatments, structural treatments, energetic structural treatments, energetic regulation, immune modulation, and regulation, immune modulation, and neurotherapy, which is one of the most neurotherapy, which is one of the most overlooked tools in chronic lime care.

overlooked tools in chronic lime care. It's important to fix the terrain first It's important to fix the terrain first before we even touch lime directly. I before we even touch lime directly. I address mold exposure, candida, gut address mold exposure, candida, gut function, detox pathways, hormone function, detox pathways, hormone balance, nervous system overload, balance, nervous system overload, mitochondrial function, emotional mitochondrial function, emotional stressors, nutrition. If the terrain is stressors, nutrition. If the terrain is inflamed, acidic, toxic, or overwhelmed, inflamed, acidic, toxic, or overwhelmed, nothing else works. ART, autonomic nothing else works. ART, autonomic response testing, helps me determine response testing, helps me determine which layers need attention first. With which layers need attention first. With regard to advanced diagnostics, I use a regard to advanced diagnostics, I use a combination of vibrant wellness stick combination of vibrant wellness stick panel, MDL, other specialty laboratory panel, MDL, other specialty laboratory tests, ART, autonomic response testing, tests, ART, autonomic response testing, viral panels, mold and micotoxin viral panels, mold and micotoxin testing, metals and environmental toxin testing, metals and environmental toxin testing, RGCC analyses. When testing, RGCC analyses.

Advanced therapeutic options

When appropriate, we identify all the hidden appropriate, we identify all the hidden players, not just one. There are real players, not just one. There are real treatments that create change. This is treatments that create change. This is where my practice stands out because I where my practice stands out because I use treatments most clinics do not use treatments most clinics do not offer. Let's talk about ozone therapy.

offer. Let's talk about ozone therapy. Ibu Exocaporeal blood oxygenation and Ibu Exocaporeal blood oxygenation and ozonation and major autohemotherapy mah ozonation and major autohemotherapy mah including the 10 pass ozone treatments including the 10 pass ozone treatments are some of the most powerful tools for are some of the most powerful tools for chronic infections and immune chronic infections and immune dysfunction. Benefits include breaking dysfunction. Benefits include breaking down biofilms, improving oxygenation, down biofilms, improving oxygenation, reducing inflammatory cytoines, reducing inflammatory cytoines, supporting detoxification, supporting detoxification, improving circulation, and helping the improving circulation, and helping the immune system see hidden infections.

immune system see hidden infections. Patients often feel lighter, clearer, Patients often feel lighter, clearer, and calmer after Eboo sessions and other and calmer after Eboo sessions and other ozone therapies. Ozenated glycerin and ozone therapies. Ozenated glycerin and prolazone are great for patients with prolazone are great for patients with stubborn joint pain, nerve pain, stubborn joint pain, nerve pain, inflammation, lime related muscular inflammation, lime related muscular skeletal problems, ligament laxity, skeletal problems, ligament laxity, trigger points. It helps the immune trigger points. It helps the immune system address local infections and system address local infections and restores structural integrity.

restores structural integrity. Photodynamic therapy with the Weber Photodynamic therapy with the Weber needle end laser is one of my favorite needle end laser is one of my favorite therapies because of its versatility.

therapies because of its versatility. Using blue light with riboflavven yellow Using blue light with riboflavven yellow green for detox red or infrared with green for detox red or infrared with methyline blue curcumin we can target methyline blue curcumin we can target bofilms penetrate tissues antibiotics bofilms penetrate tissues antibiotics can't reach support mitochondrial can't reach support mitochondrial function normalize immune activity function normalize immune activity improved microirculation reduce chronic improved microirculation reduce chronic inflammation. The Weber needle endo inflammation.

Gene-targeted interventions

The Weber needle endo laser allows me to deliver these laser allows me to deliver these benefits introvenously, interstitially benefits introvenously, interstitially or locally. The cure strain formerly or locally. The cure strain formerly known as SOT or supportive olonucleotide known as SOT or supportive olonucleotide therapy is a gene targeted anti-sense therapy is a gene targeted anti-sense therapy that uses a small piece of RNA therapy that uses a small piece of RNA or DNA sequence designed to block the or DNA sequence designed to block the replication of borillia, bartinella, replication of borillia, bartinella, besia, eps virus, cytogallo virus and besia, eps virus, cytogallo virus and other pathogens. It doesn't act like an other pathogens. It doesn't act like an antibiotic. There's no killing frenzy, antibiotic. There's no killing frenzy, no widespread toxicity. It simply blocks no widespread toxicity. It simply blocks the pathogen's ability to replicate so the pathogen's ability to replicate so the immune system can regain control. I the immune system can regain control. I typically use the cure strain after mold typically use the cure strain after mold is addressed, candida is corrected, co- is addressed, candida is corrected, co- infections are sequenced, and the infections are sequenced, and the terrain is stabilized. This maximizes terrain is stabilized. This maximizes success and minimizes flaring. Autonomic success and minimizes flaring. Autonomic response testing allows me to tailor response testing allows me to tailor treatment order, sensitivity to specific treatment order, sensitivity to specific therapies, blockages from scars, dental therapies, blockages from scars, dental issues or emotional conflicts, organ issues or emotional conflicts, organ stress, meridian imbalances, detox stress, meridian imbalances, detox capacity, photosensitizer selection, capacity, photosensitizer selection, laser color selection, and timing of the laser color selection, and timing of the curous strain. This is what makes the curous strain.

The role of neural therapy

This is what makes the treatment precise, not guesswork. treatment precise, not guesswork. Neurotherapy is often the missing link Neurotherapy is often the missing link for patients with chronic lime, mold for patients with chronic lime, mold issues, and co- infections. Here's why.

issues, and co- infections. Here's why. Lime doesn't just cause infections. It Lime doesn't just cause infections. It disrupts the autonomic nervous system, disrupts the autonomic nervous system, interferes with electrical signaling, interferes with electrical signaling, and creates so-called interference and creates so-called interference fields, areas of dysfunctional nerve fields, areas of dysfunctional nerve activity that keep the body stuck in activity that keep the body stuck in chronic illness. These interference chronic illness. These interference fields can come from old scars, dental fields can come from old scars, dental work, past injuries, emotional trauma, work, past injuries, emotional trauma, chronic inflammation, autonomic chronic inflammation, autonomic dysregulation, organ stress, lime dysregulation, organ stress, lime induced nerve irritation. Neural therapy induced nerve irritation. Neural therapy uses targeted injections of a local uses targeted injections of a local anesthetic, usually propane into anesthetic, usually propane into specific points, scars, ganglia, specific points, scars, ganglia, autonomic hubs, trigger points or organ autonomic hubs, trigger points or organ projections to reset dysfunctional nerve projections to reset dysfunctional nerve patterns and restore flow through the patterns and restore flow through the autonomic nervous system. Patient often autonomic nervous system. Patient often notice calmness, better sleep, less notice calmness, better sleep, less pain, clearer thinking, improved organ pain, clearer thinking, improved organ function, a shift out of fight or function, a shift out of fight or flight, decreased sensitivity to flight, decreased sensitivity to treatments, better tolerance of detox treatments, better tolerance of detox and cure strain, emotional releases when and cure strain, emotional releases when necessary. Neurotherapy creates a necessary. Neurotherapy creates a foundation for healing. So the rest of foundation for healing. So the rest of the treatment, EbU, other ozone the treatment, EbU, other ozone therapies, cure restraint, photodnamic therapies, cure restraint, photodnamic therapy, detoxification, works more therapy, detoxification, works more smoothly and with less reactivity. ART smoothly and with less reactivity. ART helps me determine which fields are helps me determine which fields are blocked, whether scars or dental areas blocked, whether scars or dental areas are interfering, which organs need are interfering, which organs need regulation, whether emotional shocks are regulation, whether emotional shocks are held in the system, and how to sequence held in the system, and how to sequence neurotherapy sessions. It's a gentle but neurotherapy sessions.

Recovery and conclusion

It's a gentle but powerful intervention that often unlocks powerful intervention that often unlocks rapid progress,

especially in patients rapid progress, especially in patients who have been stuck for years. Patients who have been stuck for years. Patients often ask, "How long will it take?" It often ask, "How long will it take?" It depends on the number of co- infections, depends on the number of co- infections, mold exposure, mitochondrial function, mold exposure, mitochondrial function, viral activation, emotional trauma, gut viral activation, emotional trauma, gut health, immune status, and treatment health, immune status, and treatment consistency. Most begin improving within consistency. Most begin improving within weeks to months and significant weeks to months and significant transformation often happens over transformation often happens over several months with the right sequence.

several months with the right sequence. The goal is not just fewer symptoms. The The goal is not just fewer symptoms. The goal is a body that works again goal is a body that works again physically, mentally, emotionally, and physically, mentally, emotionally, and spiritually. If you've tried everything spiritually. If you've tried everything but still feel stuck, neural therapy but still feel stuck, neural therapy combined with the right biological combined with the right biological treatments can open pathways the body treatments can open pathways the body has been unable to access for years.

has been unable to access for years. Thanks for spending this time with me. Thanks for spending this time with me. If you're struggling with chronic lime, If you're struggling with chronic lime, mold, or co- infections, and you feel mold, or co- infections, and you feel like you've run out of options, you like you've run out of options, you haven't. If this video helped you, haven't. If this video helped you, please like it, subscribe, and share please like it, subscribe, and share your experiences in the comments. What your experiences in the comments. What symptoms have been the hardest for you?

symptoms have been the hardest for you? Has anyone ever dismissed your symptoms? Has anyone ever dismissed your symptoms? Which treatments have helped or made Which treatments have helped or made things worse? Your comments help others things worse? Your comments help others feel less alone. I'll see you in the feel less alone. I'll see you in the
