I was a state trooper for 14 years I was a state trooper for 14 years stationed there in Corpus Christi and it stationed there in Corpus Christi and it was something that was dear to me that was something that was dear to me that was my childhood dream I was in great was my childhood dream I was in great health I was in the Army Reserves I was health I was in the Army Reserves I was very athletic I was a avid runner at very athletic I was a avid runner at work I would I would love to work out work I would I would love to work out pod coming back I became ill and just pod coming back I became ill and just started getting worse and worse started getting worse and worse [Music] last year I went to Colorado to have a last year I went to Colorado to have a service can test them and I was service can test them and I was diagnosed with a toxic brain injury diagnosed with a toxic brain injury which this answered a lot of our which this answered a lot of our questions that we've had over the last questions that we've had over the last eight years dealing with these eight years dealing with these neurological issues during my service in neurological issues during my service in Iraq there were burning plastics tires Iraq there were burning plastics tires medical waste so all the the was making medical waste so all the the was making a concoction of just toxicity it was a concoction of just toxicity it was were inhaling were inhaling so that affected our lungs pretty much so that affected our lungs pretty much all our major systems in our body have all our major systems in our body have I've already finished nine days and the I've already finished nine days and the hyperbaric chamber and I have about the hyperbaric chamber and I have about the six more to go and it has been I can six more to go and it has been I can already tell the difference it's been already tell the difference it's been very beneficial with me I thank dr.

very beneficial with me I thank dr. Johnson and the staff here have been Johnson and the staff here have been exceptional this is the best sleep that exceptional this is the best sleep that I've had in years I've been able to I've had in years I've been able to sleep much better I've even noticed my sleep much better I've even noticed my concentration is better and my son is concentration is better and my son is stationed in Hawaii again I talked to stationed in Hawaii again I talked to him a few days ago and you can even tell him a few days ago and you can even tell the difference just talking to me is the difference just talking to me is that it's like your your speech flows that it's like your your speech flows much smoother you know but to stay stay much smoother you know but to stay stay focused before I would I would be focused before I would I would be speaking and I would lose my train of speaking and I would lose my train of thought there was a lot of a lot of thought there was a lot of a lot of pausing but I have faith in this and I pausing but I have faith in this and I know I know from what I've researched know I know from what I've researched that it's worked for many others in the that it's worked for many others in the past and normally outside just here in a past and normally outside just here in a room environment the the body is you room environment the the body is you receive about 21% of oxygen well in this receive about 21% of oxygen well in this chamber you're receiving a hundred chamber you're receiving a hundred percent of oxygen and when it's under percent of oxygen and when it's under with with the pressure it is much more with with the pressure it is much more concentrated so there's this oxygen is concentrated so there's this oxygen is going to areas that have been damaged going to areas that have been damaged here the we have our fallen heroes this here the we have our fallen heroes this is only a small number of the fallen but is only a small number of the fallen but we have a registry of veterans that have we have a registry of veterans that have been affected by burn pit exposure or been affected by burn pit exposure or due to deployment related illnesses due to deployment related illnesses currently on our registry we have a currently on our registry we have a little over a hundred of soldiers that little over a hundred of soldiers that have passed away and died as a result of have passed away and died as a result of deployment related illnesses such as deployment related illnesses such as brain tumors different forms of cancer brain tumors different forms of cancer burn pits 360 is an organization that my burn pits 360 is an organization that my wife and I found it back in 2010 and wife and I found it back in 2010 and this was after the delay in denial issue this was after the delay in denial issue from of getting medical care my my from of getting medical care my my employer employer employer they sent me home as he I come back to they sent me home as he I come back to work until you have answers so this led work until you have answers so this led us into a journey where we would seek us into a journey where we would seek answers until someone would help us or answers until someone would help us or to see if they would help us find out to see if they would help us find out what was wrong with me cuz I would go to what was wrong with me cuz I would go to just any provider and they they didn't just any provider and

they they didn't know what was wrong so we started this know what was wrong so we started this organization burn fifty to sixty two to organization burn fifty to sixty two to advocate to do outreach do research and advocate to do outreach do research and educate the community of those that have educate the community of those that have
