Environmental illness and hidden indoor contaminants

As a physician, I've seen firsthand how environmental factors can impact health. Often ways patients and the physicians do not immediately recognize hidden mold.

Airborne bio toxins. Volatile organic compounds known as VOCs, and harmful bacteria and allergens can contribute to chronic symptoms and ongoing illness.

That's why comprehensive environmental testing matters. The mold process goes beyond basic inspections. They provide advanced testing for mold, bio toxins, VOCs, bacteria, and allergens, giving you a complete picture of what is affecting your indoor environment.

And just as important, the remediation process is different.

Comprehensive testing for mold, VOCs, bacteria, and allergens

Using eco friendly, patented methods powered by natural enzymes, the mold process eliminates contaminants without harsh chemicals, making it safer for your home and for you and also your pets.

If you're addressing environmental illness, you need more than treatment. You need answers at the source.

Eco-friendly remediation without harsh chemicals

That's where everything begins. And then effective remediation that does not rely on harsh chemicals, which can still make matters worse. The mold pros the environmental side of treating environmental illness.
