Why She Walked Away From Healthcare To Work On Quantum Energy Transcript

(Transcripts are generated by AI and may contain errors)

Introduction and guest background

My faith in the traditional healthcare system was deteriorating as I was there, working with the doctors, seeing how they were incentivized to make certain decisions from insurance companies, from big pharma.

Like it wasn't, wellness wasn' t kind of what we were doing. We were perpetuating illness. And I w as feeling that and seeing that. But that mandate was my way out.

What if aging isn't about slowing down, but leveling up? I'm Dr. Izzy Jones. This is the Longevity Leaders Podcast. Welcome everybody to today's Longevity Leaders podcast.

I'm Dr. Rudy Mueller, one of the co-hosts of this podcast, and I am joined today by Arabica Cunningham. She is the general manager of Leela Quantum Tech.

It's a pleasure to have you on board with us today. Likewise. Thank you for having me. For our pleasure. What got you into this company or the interest in this type of technology?

So I used to be a healthcare professional for over 10 years. I was a licensed nursing home administrator, and I left my career because of the vaccine mandate.

And I loved what I did, I love my staff, love the residents, but I just could not get behind such a health decision as a contingency for employment. So, ended up leaving and was unemployed for several months.

My master's is in healthcare administration as well. Kind of my hands were tied because everything that I could have done required the vaccination. And then after like several months of nothing, my mentor gave me a ring that somebody was looking for a director of operations and she had the perfect person and that was four years ago.

That's awesome. I know. Then it's been such a pleasure because to make a pivot, even though I loved what I did, My faith in the traditional healthcare system was deteriorating as I was there, working with the doctors, seeing how they were incentivized to from insurance companies, from big pharma.

Like it wasn't, wellness wasn' kind of what we were doing. We were perpetuating illness. And I was feeling that and seeing that, but that mandate was my way out because I so invested, you know, I wasn"t going to leave.

But now I get to work for a company with a We help you in a non-invasive way to ignite the inner healer in you.

Leaving healthcare and finding Leela Quantum Tech

And I just love that. So that's kind of my origin story with Leela Quantum Tech. I love it. You know, I think a lot of us hated COVID and thought it was terrible, but there were a lotta great things that came out of it and that we were able to pivot into, you know for yourself, like a new profession and a vision into what could be true health, right?

Exactly. I also think that your, your tagline there for Alila Quantum Health is bringing out the inner healer in you. Yeah, we all, yeah, and we, all can heal ourselves.

Like we are here to raise the consciousness of humanity, one person at a time. And we can't heal ourself and our technology supports that process. Okay, well, I mean, this thing is just staring me in the face.

Isn't it beautiful? So tell me a little bit about this technology. So this is our Infinity Block Advanced. It is a quantum energy field generator. Our founder developed a way to charge items.

These plates are charged such that when you assemble them and they're parallel, Between here is a concentrated quantum energy field that, for one, it's already working by harmonizing the would-be-harmful effects of Wi-Fi just being assembled in our space.

So you and I, really, everyone here, we're good because of this. But then it goes so much more than that. It charges and optimizes anything you put in here.

What types of things would we charge? I keep mine in my kitchen. I charge my food, my water, and my drinks. There have been over 60 studies done, several of which are placebo-controlled double-blind studies.

So, like, that it structures water. That it improves your blood. And it increases ATP production in your cells. It speeds up wounds healing. My favorite story of one of our studies was the doctor who did the study on the wounds-healing was thinking he was going to prove that this was a sham and that I didn't do anything.

to only find that the human wound cells exposed to our technology healed a hundred times quicker than those that weren't. And exactly. You don't charge it.

Yeah. But you can't, once you use it and you have your own proof, it's undeniable. That coupled with our science.

How the Infinity Block works

What happens if I stick my hand in there? You put your hand there, It's improving the blood in your body. All right. And you haven't made it big enough to put over my head?

We do have a bigger one. I love to lay in mine. If I have something going on, I will lay it in mind. Really? Yes. When I first started with the company, I sprained my ankle. I'm a runner.

After a month of nothing else working, it just happened to kind of vent in the meeting that my angle was not getting better after I sprained it. Our founder asked me, had I put it on the block?

I said, didn't think about that. That is wild. My mom had a gangly insist. She did not want the doctor to smash it. That was their only recourse they gave her.

So she comes to visit me in Atlanta. We're out shopping. Her hand starts burning. And I'm like, Ma, let's put your hand on the block when we get back home.

When we back get home, she puts her hand in the black. The burning goes away to never return. What? Yes, it really is. So what is this? I mean, how is it charged?

That's the only thing that we don't share is how we charge it. That is proprietary. However, so it's not the material that makes it work. It's how you charge.

But the materials of this, for example, is sandblasted aluminum. The metal is holding the charge and none of our products ever need to be recharged. Never.

When you get them, they're good to go. Okay. All right. So there, we have this, We have a bigger one of these. What's this called again? Sorry. This is called the Infinity Block Advance.

Infinity block advance. And then we a smaller version, which is like a traveling car block. Many people have electric cars, Which I say it's like sitting in Wi-Fi suits.

Yeah, that's terrible. It's terrible. Some people get sick from that, some people don't, but it's still affecting your body. With our travel block, you don' have to worry about it.

I keep mine in my car, and it' not even an electric car. And then I travel with it through the airport, because I want

that protection, I wanted that in m hotel room.

Really, wherever I go, it goes. Then we have bigger versions because our customers wanted to be able to charge like a whole bowl of salad or bigger things in the block.

So we bigger version that's round and square. And we also have this, everything that we have is available, all the blocks in round in square versions.

Okay. So just to pivot again back to this real quick. Like if I wanted to charge, somebody wanted the charge something in that five minutes. It depends like metal could be a few seconds 30 to 60 seconds your water One to three minutes your food kind of same thing you can even I mean we have doctors who use our technology I know I forget the gentleman's name, but he'd like charges his IV bags I was thinking about that.

I do that, yes. It optimizes anything you put in it. Ian Mitchell, who was a renowned, amazing scientist that most people know, he even charges his technology, I mean, his supplements in using our technology.

Personal experiences and product variations

Is it natural to be feeling like this is so ridiculous? Okay. Like, all right. This is ridiculous. I am, when I came over and I saw this for the first time now, every one of our team members wears one your necklaces.

Okay? So I've seen it enough, but I'd never experienced it. There's a weird sensation from right here that is calming, and I'm liking how it feels, but I am just curious.

If you're a medical doctor, nurse practitioner, chiropractor, or other health expert that's stuck in a broken system, there's better way. The Freedom Webinar shows you a proven five-step system to build a seven-figure virtual health practice or how to modernize your current brick-and-mortar practice without the burnout.

That is, yes, and that is normal. A lot of people do, can feel it. My mentor's daughter, she has a bigger one in her house. Her daughter it took her months to even be able to be in the room with it because she was so open and sensitive and she just, her body had to adjust.

And now she loves it so much. So, yes. I don't think it feels uncomfortable. Right. You can just feel the energy. It calms me. Exactly. This is wild. Yeah, it is.

And so I mentioned her example because it's still effective and it still great, but there are different feelings that people can have. But it all to a great end.

Very cool. Yeah. Okay. So we have these two blocks, then the necklaces. Talk to me a little bit about the necklace. We have our HEAL 360 capsule. This is my own necklace, but the capsule itself, we had different variations of this.

One of our current popular ones is our Heal 360 Capsule. That's the one that a lot of your team has. The capsule, itself is imprinted with the frequency.

It's our heel 360 frequency, which promotes your overall well-being. Then inside our titanium spheres that are charged with quantum energy, So when you put the spheres in the capsule, it's pushing those frequencies out into your field.

So what it is doing is, I call, creating a bubble of optimization and protection. It's optimizing you on a cellular level, and it also doing all the things that this does, improving your blood, heart rate variability, harmonizing the would-be harmful effects of Wi-Fi and EMF.

So the wearable is an extension of that, but this covers a building, for example, and the necklace covers you. Then we have different varieties.

Heal 360 capsule and wearable benefits

We have like a woman's booster capsule, a man's boosted capsule Olympic performance capsule. So each capsule is imprinted with a different frequency that has a difference purpose.

You can use whichever one suits your needs. Really interesting. Okay. Improving HRV as an example, it would make sense that it will help do that. It's impacting the autonomic nervous system.

I guess what the question is, is it blocking EMF? No, its harmonizing it. We do have clothing, we have jackets. So like two tuning forks. Right, our clothing is EMT blocking.

This is not EMF blocking. It's harmonizing. So it's taking the harmful EMMF and balancing it to a good, a healthful… Correct. Correct, so that there's no negative effects, but it still there.

Very interesting. Yes. Okay. No blocking, people always will ask, if can I use a reader? You will still read that the wifi is, or the EMMs are around, they're not negatively affecting you.

We had a cardiologist, I guess last year I think, came to us because there have been dark field microscopy studies done, live blood analyses that have shown how your blood has improved with our technology.

Well, he has his own darkfield microscopes and he came into our booth to tell us that he did his study and found the same thing and was just blown away that like he saw this on his own.

Another gentleman last year has been measuring his HRV for years, he said. He bought one of these capsules at the top of last-year. he saw us again in September, and he was so excited to show us how his hrv had been improving ever since he put the capsule on.

And he had his data. It was stable and in one place until he started wearing the capsule. That's awesome. That is unbelievable. So if I'm a consumer or a client or like a patient or client, or practitioner, and I want to bring this in, like, how do you seeing practitioners recommend this to clients?

So I think using the technology in the clinic is a great place to start. Of course, like you having a block in your lobby or, you know, just there that alone is helping your clients because you're harmonizing the would be harmful effects.

You can take it a step further by charging your IV bags or incorporating this in different ways and your treatment. We also have some clinicians or practitioners who resell, like our frequency cards.

We have, they're like a little card that is similar to a credit card, and they are imprinted with different frequencies.

Practitioner use cases and wholesale options

And so we have like brain support, skeletal and fascial optimization, cell rebalance, we literally have over 30 of these. and we some have clinicians who, depending on what their patients have going on, that recommend certain cards, so one lady buys a bunch just kind of, she knows what her clientele has going on and then she sells them that way.

Same with the necklaces, because it's so easy to push a pill or a protocol or, you know, and those things pile up with time and it can be a lot to manage, but our technology is a non-invasive way, there's nothing for them to do, they get it once and they work so they can incorporate it in kind that home care and beyond the office.

All seen, all sought. And then for clients, they have to go through a practitioner or? No, practitioners can come to us directly. We do have a special wholesale program for practitioners specifically.

Through it, our typical first purchase minimum for the wholesale programs is usually $5,000, but for practitioner, it's $2,500. They have access to all of our products at wholesale pricing.

The only caveat is the minimums are met with frequency card purchases and capsule purchases only. Cause we found that that's typically the place that practitioners start with introducing our technology to their patients.

Yeah. But you can buy blocks at the discount still. So you still get all the benefits. And then their, their patience can either come to us directly or they can go through them.

We also offer affiliate partnerships. So if you wanted to have an affiliate link where you recommend it, and then they still just purchase through us.

So there's several ways and we're open to beyond that. If somebody has a supplement that they develop, they can use our technology to enhance their supplement.

There are several that we would love to partner with the clinicians. That's great. Well, Rebecca, thank you so much. I mean, from a website perspective.

LilaQ.com. L-E-L-A-Q.com. Check us out. We would love to have you and to be a part of what you offer to your patients. I've done seven or eight podcasts already today.

This thing is wild. This is super strong and it's new. It's our newest and its very strong, so I'm not shocked. I wouldn't say that if I wasn't feeling something.

So that is unbelievable. You know, when I first started with the company, and I'll be quick, at conferences we have several blocks assembled.

Closing remarks and contact information

And it took me like a year. I would always feel sick the first day of a conference because it was just so much energy, like at one time and so close in our booth.

Now I'm used to it because there's been years, but yeah, it's definitely… I can… It's like almost like light vibration. Yeah. That's right. Okay, cool.

Well, thank you so, much. Thank you. And we'll see you next time. Thanks for listening to the Longevity Leaders podcast. A Lungevity leaders community is on mission to transform a hundred million lives by 2040. If you enjoyed the show, please share this with somebody that you know, especially another doctor or physician, but also click that follow button.

Until next time, stay strong and live long.
